

RB002 Week 2 — English Worksheet (Beginner)

Topic: Strings — Talking Code · **Course:** Story Quest · **Level:** Beginner · **Time:** about 30 minutes

This week your code starts **talking**. You join strings together with `..` to build messages.

1 · Predict 🧐

Read the script. Before you imagine running it, circle or write your answer.

```
local name = "Mina"
print("Welcome, " .. name .. "!")
```

Does it print `Welcome, Mina!` ? Circle one: yes · no

Why?

```
print("Story" .. "Quest")
```

Is there a space between the two words when it prints? Circle one: yes · no

2 · Find the Difference 🦎

Each pair shows clean code first, then a broken version of the same idea. Circle what's different and write one short sentence about the bug.

Pair A — The script should print `Hello, Mina!` .

```
-- clean
local name = "Mina"
print("Hello, " .. name)
```

```
-- buggy
local name = "Mina"
print("Hello, " + name)
```

What is wrong? Which symbol joins strings?

Pair B — The script should print `Welcome to the village` .

```
-- clean
local place = "the village"
print("Welcome to " .. place)
```

```
-- buggy
local place = "the village"
print("Welcome to" .. place)
```

What is wrong? Look inside the quotes very carefully.

3 · Fill the Gap

The script should print `Hi, Mina` . One symbol is missing. Fill it in using the word bank.

```
local name = "Mina"  
print("Hi, " ____ name)
```

Word bank: `..` · `+` · `==`

Write the missing symbol:

4 · Tell Me What You Built 📷

Now switch to your own quest world. Add a script that prints a welcome message built with `..`. When you finish, come back here.

Send a photo or video of your message in the Output window, then explain what you did. Use these sentence starters — write 2 or 3 sentences.

My world says ... when ...

I used `..` to join ...

One tricky moment was when ...

5 · Record Your Walkthrough

Take a video on your phone (or a parent's phone) while you test your world. Talk like you are teaching a friend. Try to use these words: **string**, **join**, **message**.

1. Show your script, then press Play and show the message in the Output window.
2. Read your `print` line out loud and point at the `..`.
3. Say in your own words what `..` does to two strings.

Write what you will say in your video. You can read from it while filming.
