

RB004 Week 2 — English Worksheet

Topic: Teams — Red vs Blue · **Course:** Arena Legends · **Time:** about 45 minutes

This week your arena gets **teams**. The Teams service holds a Team object for each side, every team has a **TeamColor**, and a SpawnLocation with a matching TeamColor (and **Neutral = false**) only spawns players from that team.

1 · Predict 🧠

Read each script. Before you imagine running it in Studio, write what you think will happen.

```
-- Script in ServerScriptService
local Teams = game:GetService("Teams")

local red = Instance.new("Team")
red.Name = "Red"
red.TeamColor = BrickColor.new("Bright red")
red.AutoAssignable = true
red.Parent = Teams

local blue = Instance.new("Team")
blue.Name = "Blue"
blue.TeamColor = BrickColor.new("Bright blue")
blue.AutoAssignable = true
blue.Parent = Teams
```

You test with 2 Players. Both teams are AutoAssignable. Which team does Player1 get? Which team does Player2 get?

```
-- Script in ServerScriptService
local spawn = workspace.RedSpawn

spawn.TeamColor = BrickColor.new("Bright red")
spawn.Neutral = false
```

RedSpawn is a SpawnLocation. After this script runs, which players are allowed to spawn at RedSpawn? What about a Blue player?

```
-- Script in ServerScriptService
local Teams = game:GetService("Teams")

local red = Instance.new("Team")
red.Name = "Red"
red.TeamColor = BrickColor.new("Bright red")
red.AutoAssignable = true
red.Parent = Teams

local blue = Instance.new("Team")
blue.Name = "Blue"
blue.TeamColor = BrickColor.new("Bright blue")
blue.AutoAssignable = false
blue.Parent = Teams
```

Blue is NOT AutoAssignable. You test with 2 Players. Which team do both players join? What happens to the Blue team?

2 · Spot the Bug 🐛

Each block of code below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The Red team uses `BrickColor.new("Bright red")`. This SpawnLocation should spawn **only Red players**, but nobody ever spawns there.

```
-- Script in ServerScriptService
local spawn = workspace.RedSpawn

spawn.TeamColor = BrickColor.new("Really red")
spawn.Neutral = false
```

Hint: the spawn's TeamColor must match a team's TeamColor **exactly** — "Really red" and "Bright red" are two different colors.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — Players should be sorted onto Red and Blue automatically when they join. Instead, everyone joins as Neutral.

```
-- Script in ServerScriptService
local Teams = game:GetService("Teams")

local red = Instance.new("Team")
red.Name = "Red"
red.TeamColor = BrickColor.new("Bright red")
red.AutoAssignable = false
red.Parent = Teams

local blue = Instance.new("Team")
blue.Name = "Blue"
blue.TeamColor = BrickColor.new("Bright blue")
blue.AutoAssignable = false
blue.Parent = Teams
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — Red and Blue should be two different teams. But in the game, the two teams get mixed up and the spawns don't work right.

```
-- Script in ServerScriptService
local Teams = game:GetService("Teams")

local red = Instance.new("Team")
red.Name = "Red"
red.TeamColor = BrickColor.new("Bright red")
red.AutoAssignable = true
red.Parent = Teams

local blue = Instance.new("Team")
blue.Name = "Blue"
blue.TeamColor = BrickColor.new("Bright red")
blue.AutoAssignable = true
blue.Parent = Teams
```

Hint: Roblox tells teams apart by **TeamColor**, not by Name. Two teams must never share one color.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now open your own arena game. Make a Red team and a Blue team, give each team its own SpawnLocation with a matching TeamColor and `Neutral = false`, then test with **Test tab** → **2 Players**. When you finish, come back here.

Send a photo or video of the two players standing at their team spawns, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I ...

I gave each team a different **TeamColor** because ...

I set **Neutral = false** on the spawns so that ...

When I tested with 2 Players, I saw ...

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while you test your teams with 2 Players. Talk through it like you are teaching someone who has never seen it. Try to use these words: **team**, **TeamColor**, **AutoAssignable**, **SpawnLocation**, **Neutral**.

1. Show your Teams folder and read the two team names and colors out loud.
2. Press Test → 2 Players and show which team each player joined.
3. Show that each player spawned at their own team's SpawnLocation.
4. Say in your own words how a SpawnLocation knows which team it belongs to.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
