

RB005 Week 6 — English Worksheet (Beginner)

Topic: Playtest & Iterate — Find Bugs, Fix Bugs · **Course:** Dream Game Studio · **Level:** Beginner ·

Time: about 30 minutes

This week you are a **bug hunter**. Real game studios test, find bugs, fix them, and test again: **see it** → **write it** → **fix it** → **retest**.

1 · Predict 🧠

Read the script. Before you imagine running it in Studio, circle or write your answer.

```
local coin = script.Parent

coin.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player then
        player.leaderstats.Coins.Value += 1
        coin:Destroy()
    end
end)
```

The player touches the coin one time. The coin is destroyed. Can they touch it again to get more points? Circle one: yes · no

Why?

```
local coin = script.Parent

coin.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player then
        player.leaderstats.Coins.Value += 1
    end
end)
```

This coin is never destroyed. The player stands on it and touches it many times. Could they get many points from one coin? Circle one: yes · no

2 · Find the Difference 🦎

Each pair shows clean code first, then a broken version of the same idea. Circle what's different and write one short sentence about the bug.

Pair A — One coin should give **only 1 point**.

```
-- clean
coin.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player then
        player.leaderstats.Coins.Value += 1
        coin:Destroy()
    end
end)
```

```
-- buggy
coin.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player then
        player.leaderstats.Coins.Value += 1
    end
end)
```

What is wrong? Why can the buggy coin give too many points?

Pair B — The door should open at **5 coins or more**.

```
-- clean
if player.leaderstats.Coins.Value >= 5 then
    door.CanCollide = false
end
```

```
-- buggy
if player.leaderstats.Coins.Value > 5 then
    door.CanCollide = false
end
```

What is wrong? With the buggy code, what happens when the player has exactly 5 coins?

3 · Fill the Gap

The door should open when the player has **5 coins or more**. One symbol is missing. Fill it in using the word bank.

```
if player.leaderstats.Coins.Value ____ 5 then
    door.CanCollide = false
end
```

Word bank:  ·  · 

Write the missing symbol:

4 · Tell Me What You Built 📷

Now playtest your own game. Find **one bug** (code bug or a confusing place) and fix it. When you finish, come back here.

Send a photo or video of your game after the fix, then explain what you did. Use these sentence starters — write 2 or 3 sentences.

The bug I found was ...

I fixed it by ...

When I tested again, ...

5 · Record Your Walkthrough 🎥

Take a video on your phone (or a parent's phone) showing your bug **before and after** the fix. Talk like you are teaching a friend. Try to use these words: **bug, fix, test, again.**

1. Show the bug happening.
2. Show the line you changed and read it out loud.
3. Test again on camera and show the bug is gone.

Write what you will say in your video. You can read from it while filming.
