

★ WD003 Week 4 — English Worksheet

Topic: Hero + About — Polish · **Course:** Portfolio Site · **Time:** about 45 minutes

This week you make your **Hero** and **About** sections look great. The Hero is the **first impression** — big text, lots of space, centered. The About section sits a photo next to your introduction, side by side. And you make both work on a **phone** with a media query.

Two new tools this week: **Flexbox** (`display: flex`) to line things up, and a **media query** (`@media (max-width: 600px)`) to change the layout on small screens.

1 · Predict 🧠

Read each block of CSS. Before you imagine the page, write what you think will happen.

```
#hero {  
  height: 100vh;  
  display: flex;  
  flex-direction: column;  
  justify-content: center;  
  align-items: center;  
}
```

100vh means "100% of the screen height." How big is the Hero, and where does its content sit?

```
#about {  
  display: flex;  
  gap: 32px;  
  align-items: center;  
}
```

The About section has a photo and a paragraph inside it. With `display: flex`, do they sit side by side or stacked? What does `gap` do?

```
@media (max-width: 600px) {  
  #about { flex-direction: column; }  
}
```

On a wide laptop the About content is side by side. What happens when the screen gets narrower than 600px?

2 · Spot the Bug 🐛

Each block of CSS below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The Hero content is supposed to be centered in the middle of the screen, but everything is stuck in the top-left corner.

```
#hero {  
  height: 100vh;  
  display: flex;  
}
```

Hint: flex can center, but only when you tell it to — on both axes.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The About photo and paragraph are supposed to sit side by side, but they are stacked on top of each other on the laptop.

```
#about {  
  display: flex;  
  flex-direction: column;  
  gap: 32px;  
}
```

Hint: one of these lines forces a stack. The default flex direction is a row.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — On a phone, the side-by-side About layout is supposed to stack into a column so it fits. Right now the media query never triggers because the condition is backwards.

```
@media (min-width: 600px) {  
  #about { flex-direction: column; }  
}
```

Hint: you want this to apply on *small* screens, not big ones.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Build Your Hero + About 📷

Open your site and finish these two sections.

1. Make the Hero **full screen height** and center your name and one-line tagline inside it.
2. Give the Hero a background using one of your color variables.
3. In the About section, place your **photo next to your introduction** with Flexbox.
4. Add a media query so that on a narrow screen, the About content **stacks** and the Hero text shrinks a little.

When you finish, open your site on a **laptop and on a phone** (or resize the browser window narrow). Send **photos or a video** of both layouts, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

My Hero section says ...

I centered the Hero content by ...

In the About section, Flexbox lined up ...

On a phone, my layout changes by ...

The hardest part was ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while you show both layouts. Talk through it like you are teaching someone who has never used Flexbox. Try to use these words: **Hero, Flexbox, center, media query, mobile.**

1. Show your Hero filling the whole screen.
2. Show your About section side by side on a wide screen.
3. Make the window narrow (or open it on a phone) and show the layout change.
4. Read your media query out loud and say what makes it trigger.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
