

Builder Basics — Complete Your Village (Extension · Intermediate)

Topic: Bring It All Together · **Course:** Builder Basics · **Level:** Intermediate · **Type:** Extension Activity ·
Time: about 45 minutes

 This is a bonus challenge, not a weekly lesson. Try it after the Week 8 village project, once you can build with loops and move the agent between spots.

1 · The Challenge

Finish your village so it feels like a place someone could live. There is no map — **you** choose the sizes and where things go. It must have **all four**:

 A house with a roof  A well  A small pond  A small flower bed

 One rule: **everything is built with code.** No placing blocks by hand.

Why does "build it with code" matter more than just how it looks?

2 · Plan the Four Parts

Fill in the table. For each structure, note the main block you will use and whether it needs a loop.

Structure	Main block(s)	Loop? (yes / no)
 House + roof		
 Well		
 Small pond		
 Small flower bed		

Pick the two hardest structures to build. What makes each one tricky?

3 · Think in Loops

A loop is for anything you repeat — a row of wall blocks, a row of flowers, the four sides of a well.

Choose one structure. Describe the loop: what does it repeat, and how many times?

Between one structure and the next, what must the agent do so builds don't land on top of each other?

4 · Show Your Work 📷 🎥

Go to your homework world and build. Run your code one structure at a time and move the agent between them. Keep going until the village has **the house with a roof, the well, the small pond, and the small flower bed** — all placed by code.

Record **one video** (a phone is fine). Show two things:

1 · Your code. Scroll through it. Say what each part does.

2 · Your build. Point the camera. Name the parts.

Fill the blanks:

Today I built _____.

I built it using this code: _____.

In this code I used _____.

The hardest part was _____.

That part was hard because _____.

Write your lines here, then say them in your video.
