

Builder Basics — Complete Your Village (Extension)

Topic: Bring It All Together · **Course:** Builder Basics · **Type:** Extension Activity · **Time:** about 60 minutes

 This is a bonus challenge, not a weekly lesson. Try it after the Week 8 village project, once you can build with loops and move the agent between spots.

1 · The Challenge

Your village has a good start, but a real village needs more than walls. **Complete your village** so it feels like a place someone could live.

By the end, your village must have **all four** of these:

 A house with a roof  A well  A small pond  A small flower bed

There is no fixed size and no map. **You** decide how big each thing is and where it goes. One rule you must not break:

 **Everything must be built with code.** No placing blocks by hand — every wall, flower, and drop of water goes down because the agent ran your commands.

In your own words, what four things must your village have when you finish?

Why do you think we say "build it with code" instead of placing blocks by hand?

2 · Plan Before You Build

A builder plans first. For **each** of the four structures, decide what it is made of and how big. Think about the blocks and whether you need a loop.

House with a roof — What blocks? How wide and how tall? Where does the roof sit?

Well — What shape is the hole? What goes around the top? Is there water inside?

Small pond — How will you make the dip in the ground? What fills it?

Small flower bed — What holds the soil? How many flowers, and how will you place a row of them?

3 · Think in Loops

You built walls with loops before. A loop is for anything you do **again and again** — a row of wall blocks, a row of flowers, the four sides of a well.

Which of your four structures will use a loop, and what does the loop repeat each time?

Between one structure and the next, the agent has to **walk to a new spot** so nothing lands on top of the last build.

Between the house and the pond, what will the agent do to get to a clean spot?

4 · Show Your Work 📷 🎥

Now go to your homework world and build. Run your code for each structure, one at a time, and move the agent between them. Keep going until your village has **the house with a roof, the well, the small pond, and the small flower bed** — all placed by code.

Record **one video** (a phone is fine). Show two things:

1 · Your code. Scroll through it. Say what each part does.

2 · Your build. Point the camera. Name the parts.

Fill the blanks:

Today I built _____.

I built it using this code: _____.

In this code I used _____.

The hardest part was _____.

That part was hard because _____.

Write your lines here, then say them in your video.
