

005 Week 2 — English Worksheet (Beginner)

Topic: One Function, Many Booths — Arguments & Parameters · **Course:** Theme Park Creator · **Level:** Beginner · **Time:** about 30 minutes

This week you build a small park **booth** with a **function**. You give the function some **parameters** — words and numbers it uses inside — so the same function can build a wood booth, a stone booth, a big one, or a small one, just by changing what you **call** it with.

These are the blocks you use this week:

```
blocks.fill(OAK_PLANKS, pos(0, 0, 0), pos(4, 0, 4), FillOperation.HOLLOW)
```

`blocks.fill(...)` fills a box between two corners. The first word is the **material** (like `OAK_PLANKS` or `STONE_BRICKS`). `pos(x, y, z)` is a spot: `x` = left/right, `y` = up, `z` = forward/back. `FillOperation.HOLLOW` builds only the **walls** and leaves the middle empty.

1 · Meet Arguments and Parameters 📁

A **parameter** is an empty box with a name. An **argument** is what you drop into that box. Same boxes, different stuff → **same function, different booths**.

WHEN YOU MAKE IT — the names in () are PARAMETERS (empty boxes):

```
def build_booth( wall , size ):
```

WHEN YOU CALL IT — the values in () are ARGUMENTS (real stuff):

```
build_booth( OAK_PLANKS , 4 )
```

They line up by position, left to right:

1st box	wall	←	1st value	OAK_PLANKS
2nd box	size	←	2nd value	4

In your own words: what is a parameter? What is an argument?

2 · Predict 🧠

Read the code. Before you imagine the booth, write your answer.

```
def build_booth(wall, size):  
    blocks.fill(wall, pos(0, 0, 0), pos(size, 0, size), FillOperation.HOLLOW)  
  
build_booth(STONE_BRICKS, 4)
```

What material is the booth made of, and how wide is it?

```
def build_booth(wall, size):  
    blocks.fill(wall, pos(0, 0, 0), pos(size, 0, size), FillOperation.HOLLOW)
```

There is no call after the definition. Does a booth get built? Circle one: yes · no

3 · Find the Difference 🐉

Each pair shows clean code first, then a broken version. Circle what's different and write one short sentence about the bug.

Pair A — The function should be **called** so a booth appears.

```
# clean
def build_booth(wall, size):
    blocks.fill(wall, pos(0, 0, 0), pos(size, 0, size), FillOperation.HOLLOW)

build_booth(OAK_PLANKS, 4)
```

```
# buggy
def build_booth(wall, size):
    blocks.fill(wall, pos(0, 0, 0), pos(size, 0, size), FillOperation.HOLLOW)
```

What is wrong? Why does the buggy code build nothing?

Pair B — The booth should be made of whatever material you send in.

```
# clean
def build_booth(wall, size):
    blocks.fill(wall, pos(0, 0, 0), pos(size, 0, size), FillOperation.HOLLOW)
```

```
# buggy
def build_booth(wall, size):
    blocks.fill(STONE_BRICKS, pos(0, 0, 0), pos(size, 0, size),
FillOperation.HOLLOW)
```

What is wrong? Why is every booth stone, even when you send in **OAK_PLANKS ?**

4 · Fill the Gap

This function should build a booth the size of the number you send in. One word is missing — the **parameter** the function forgot to use. Fill it in from the word bank.

```
def build_booth(wall, size):  
    blocks.fill(wall, pos(0, 0, 0), pos(____, 0, ____), FillOperation.HOLLOW)  
  
build_booth(OAK_PLANKS, 6)
```

Word bank: size · wall · HOLLOW

Write the missing word:

5 · Tell Me What You Built 📷

Now switch to your homework world. Write one `build_booth` function with a `wall` parameter and a `size` parameter, then call it two times with different materials or sizes. When you finish, come back here.

Send a photo or video of your booths, then explain what you did. Use these sentence starters — write 2 or 3 sentences.

My function's two parameters were ...

When I called it with a different material, ...

One tricky moment was when ...

6 · Record Your Walkthrough

Take a video on your phone (or a parent's phone) while your code builds the booth. Talk like you are teaching a friend. Try to use these words: **function**, **parameter**, **argument**, **call**.

1. Show your function and run your code.
2. Show two booths built with different values.
3. Say in your own words what a **parameter** is and what an **argument** is.

Write what you will say in your video. You can read from it while filming.
