

RB001 Week 1 — English Worksheet

Topic: Your First Script · **Course:** Obby Architect · **Time:** about 45 minutes

This week you wrote your first script in Roblox Studio. `print` sends a message to the **Output** window, and `script.Parent` is the part your script lives inside — your code can change it.

1 · Predict 🧠

Read each script. Before you run anything, write what you think will happen.

```
print("Hello")
print("Obby")
```

What does the Output window show? Write the lines in order.

```
script.Parent.Color = Color3.fromRGB(255, 0, 0)
```

This script is inside a platform. What color does the platform turn when the game runs?

```
print("Start")
script.Parent.Color = Color3.fromRGB(0, 255, 0)
script.Parent.Material = Enum.Material.Neon
print("Done")
```

What happens to the platform? What does the Output window show?

2 · Spot the Bug 🐛

Each script below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The script is supposed to print `Welcome to my obby!` in the Output window.

```
print(Welcome to my obby!)
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The script is supposed to turn the platform blue. It runs, but the platform does not change.

```
script.Parent.Colour = Color3.fromRGB(0, 0, 255)
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The script is inside a platform and should make **the platform** glow with Neon material.

```
script.Material = Enum.Material.Neon
```

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to your own obby in Roblox Studio. Use a script to recolor your obby platforms by code — pick your own `Color3.fromRGB` numbers and try the Neon material too. When you finish, come back here.

Send a photo or video of your recolored obby, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I ...

I used `print` to ...

I changed the color with ...

My favorite color was ... because ...

One tricky moment was when ...

To fix it, I ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while you show your Roblox Studio screen. Talk through it like you are teaching someone who has never seen it. Try to use these words: **script**, **Output**, **print**, **Color3**, **Parent**.

1. Show the Explorer window and click on your script.
2. Run the game and show your `print` message in the Output window.
3. Point at a platform your code recolored and read the color line out loud.
4. Say in your own words what `script.Parent` means.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
