

RB003 Week 2 — English Worksheet

Topic: Conveyor & Collector — Touch, Pay, Destroy · **Course:** Tycoon Engineer · **Time:** about 45 minutes

This week ore rides a **conveyor** into a **collector pad**. The pad uses **Touched** to check the part's name, pay cash, and destroy the ore.

1 · Predict 🧠

Read each script. Before you imagine running it in Roblox Studio, write what you think will happen.

```
local conveyor = script.Parent
conveyor.Anchored = true
conveyor.AssemblyLinearVelocity = Vector3.new(8, 0, 0)
```

The conveyor is anchored, so it stays still. What happens to an ore that lands on top of it?

```
local collector = script.Parent

collector.Touched:Connect(function(otherPart)
    if otherPart.Name == "Ore" then
        print("Ore collected!")
    end
end)
```

A part named **Ore** touches the pad. What prints? A player's foot touches the pad — what prints then?

```
local collector = script.Parent
local cash = workspace.Cash -- an IntValue named "Cash"

collector.Touched:Connect(function(otherPart)
    if otherPart.Name == "Ore" then
        cash.Value += 5
        otherPart:Destroy()
    end
end)
```

Three ores ride the conveyor onto the pad, one by one. How much cash do you earn in total?

What happens to each ore?

2 · Spot the Bug 🐛

Each block of code below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The pad should pay 5 cash for every part named `Ore`. Ores touch the pad but the cash **never goes up** — and there is no red error.

```
collector.Touched:Connect(function(otherPart)
  if otherPart.Name == "ore" then
    cash.Value += 5
    otherPart:Destroy()
  end
end)
```

Hint: the ores in workspace are named `Ore` with a capital O.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — Each ore should pay **once** and then disappear. Instead, the ores pile up on the pad and keep paying **over and over** every time they touch it.

```
collector.Touched:Connect(function(otherPart)
  if otherPart.Name == "Ore" then
    cash.Value += 5
  end
end)
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The conveyor should stay in place and push the ore along the top. Instead, the **conveyor itself slides away** when the game starts.

```
local conveyor = script.Parent
conveyor.Anchored = false
conveyor.AssemblyLinearVelocity = Vector3.new(8, 0, 0)
```

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to Roblox Studio and open your tycoon. Build a conveyor that pushes ore into a collector pad. The pad should pay cash with `+=` and destroy the ore. When you finish, come back here.

Send a photo or video of an ore riding the conveyor and your cash going up, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I ...

My conveyor pushes the ore because ...

When an ore touches the pad, ...

One tricky moment was when ...

To fix it, I ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while your tycoon runs. Talk through it like you are teaching someone who has never seen it. Try to use these words: **Touched, conveyor, velocity, Destroy, cash.**

1. Press Play and show an ore landing on your conveyor.
2. Show the ore riding into the collector pad and your cash going up.
3. Read your `Touched` function out loud and say when the `if` runs.
4. Say in your own words why we call `otherPart:Destroy()` .

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
