

RB003 Week 8 — English Worksheet

Topic: Ship It — Publish & Present · **Course:** Tycoon Engineer · **Time:** about 45 minutes

This week you **publish** your tycoon so anyone can play it, check that saving works in the real published game, and present your work. Light code week — you read **your own** scripts.

1 · Predict 🧠

This week you read your **own** scripts. Open each one in Roblox Studio, find the line, then answer.

```
-- Open YOUR dropper script.
-- Find this line and write your number:
task.wait( ? )
```

How often does your dropper drop? With your payout, how much cash can a player earn from one dropper in one minute?

```
-- Open YOUR buy button script.
-- Find this line and write your number:
if cash.Value >= ? then
```

What does your cheapest upgrade cost? How many drops does a player need before they can buy it?

```
-- Open YOUR DataStore script.
-- Find these two lines:
store:SetAsync(player.UserId, cash.Value)
local saved = store:GetAsync(player.UserId)
```

Which line saves and which line loads? What does your script do for a brand-new player who has no save yet?

2 · Spot the Bug 🐛

These are **launch bugs** — the code is fine, but a setting or a step is wrong. Read what is **supposed** to happen, write the fix, then explain why it went wrong.

Bug A — You test saving in Studio. The code is perfect, but you see a red DataStore error in the Output window.

```
Game Settings → Security  
[ ] Enable Studio Access to API Services ← OFF
```

Write the fix:

Why was it wrong? Why does your fix work?

Bug B — You send the game link to a friend. They see "**This experience is unavailable.**" They should be able to join and play.

```
Game Settings → Permissions  
Playability: Private
```

Write the fix:

Why was it wrong? Why does your fix work?

Bug C — Your friend plays your game, but they see **yesterday's version** — no gold dropper, old prices. They should see today's version.

```
Yesterday: File → Publish to Roblox  ✓  
Today:     changed prices, added GoldDropper  
Today:     closed Studio without publishing  ← !
```

Write the fix:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now publish your tycoon: give it a **name**, a **description**, and an **icon**, and set it to **Public**. Then play your published game and check the DataStore — earn cash, leave, rejoin. Is your cash still there?

Send a photo or video of your game's page and your cash after rejoining, then write your **presentation plan**. Use these sentence starters — write 4 to 6 sentences total.

My game is called ... and you can play it by ...

My money loop works like this: ...

The hardest bug I fixed was ...

My favorite script is ... because ...

I chose my prices so that ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) — this is your **presentation**. Talk through your published game like you are showing it to a new player. Try to use these words: **publish, public, DataStore, money loop, upgrade**.

1. Show your game's page — its name, icon, and that it is Public.
2. Play your published game: earn cash and buy an upgrade.
3. Leave and rejoin — show your cash is still there.
4. Tell the hardest bug you fixed and your favorite script.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
