

RB005 Week 3 — English Worksheet (Beginner)

Topic: Core Mechanic — Pick Your Pattern · **Course:** Dream Game Studio · **Level:** Beginner · **Time:** about 30 minutes

This week you script your game's **core mechanic** — the thing the player does again and again — using a **pattern** from your toolbox.

1 · Predict

Read the code. Before you run it in Studio, circle or write your answer.

```
local coin = script.Parent
local debounce = false

coin.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player and not debounce then
        debounce = true
        player.leaderstats.Coins.Value += 1
        coin:Destroy()
    end
end)
```

You touch the coin. Do your Coins go up? Circle one: yes · no

Why?

```
local door = workspace.GoldDoor

door.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player and player.leaderstats.Coins.Value >= 10 then
        door.CanCollide = false
    end
end)
```

You have 4 coins and touch the door. Does it open? Circle one: yes · no

2 · Find the Difference 🦁

Each pair shows clean code first, then a broken version of the same idea. Circle what's different and write one short sentence about the bug.

Pair A — One touch should give **1** coin, not many.

```
-- clean
local debounce = false

coin.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player and not debounce then
        debounce = true
        player.leaderstats.Coins.Value += 1
        coin:Destroy()
    end
end)
```

```
-- buggy
coin.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player then
        player.leaderstats.Coins.Value += 1
    end
end)
```

What is missing? How many coins can one touch give in the buggy code?

Pair B — The countdown should tick once per second.

```
-- clean
while timeLeft > 0 do
    print(timeLeft)
    task.wait(1)
    timeLeft -= 1
end
```

```
-- buggy
while timeLeft > 0 do
  print(timeLeft)
  timeLeft -= 1
end
```

What is missing? What does the buggy countdown look like in the Output?

3 · Fill the Gap

The countdown should pause for 1 second between numbers. One word is missing. Fill it in using the word bank.

```
local timeLeft = 30

while timeLeft > 0 do
  print(timeLeft .. " seconds left!")
  task.____(1)
  timeLeft -= 1
end
```

Word bank: wait · stop · sleep

Write the missing word:

4 · Tell Me What You Built 📷

Now open your game and script your core mechanic using a pattern from the toolbox. When it works, come back here.

Send a photo or video of your mechanic working, then explain what you did. Use these sentence starters — write 2 or 3 sentences.

My core mechanic is ...

I used the ... pattern ...

One tricky moment was when ...

5 · Record Your Walkthrough 🎥

Take a video on your phone (or a parent's phone) while your mechanic runs. Talk like you are teaching a friend. Try to use these words: **pattern**, **event**, **debounce**.

1. Play your game and show the core mechanic working.
2. Read your **Touched** line (or your loop) out loud.
3. Say which pattern you used from the toolbox.

Write what you will say in your video. You can read from it while filming.
