

M004 Week 8 — English Worksheet

Topic: Final — Your Minigame / Dungeon · **Course:** Functions & Games · **Time:** about 45 minutes

This is your **final week** — no new ideas. You combine everything you already know: your function library, chat commands, sensing, and events. Together they make a playable **minigame or dungeon**.

1 · Predict 🧠

Below is the plan for a small minigame. Read each part, then write what you think happens step by step.

```
on chat command "start":
    teleport player to room 1
    say "Find the gold block!"
```

A friend types **start** in chat. What two things happen, and in what order?

```
on player walks on red carpet:
    replace block below with air
    say "Trap!"

on player walks on gold block:
    say "You win!"
    give player 1 diamond
```

The player crosses the red carpet, then reaches the gold block. What happens at each step?

```
function build_arena():
    build_room()
    move forward 6
    build_room()
    move forward 6
    build_room()

on chat command "start":
    build_arena()
    teleport player to room 1
    say "Reach the gold block. Watch out for red carpet!"
```

Walk through **start** step by step — what gets built, where does the player land, and what do they see room by room?

2 · Spot the Bug 🐛

Each block of code below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The gold goal block should be in the **last** room, after the trap. Right now players win in room 1 without ever facing the trap.

```
function build_arena():  
  build_room()  
  place gold block  
  move forward 6  
  build_room()  
  place red carpet  
  move forward 6  
  build_room()
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The trap should fire **only on red carpet**. Right now it fires on every step — players fall the moment the game starts, right at spawn.

```
on player walks:  
  spring_trap()
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The gold block is the **goal** and the red carpet is the **trap**. Right now the two reactions are swapped.

```
on player walks on gold block:  
  say "Trap!"  
  replace block below with air  
  
on player walks on red carpet:  
  say "You win!"  
  give player 1 diamond
```

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to your homework world and build your own minigame or dungeon. **Plan first**, then build, then playtest.

Plan your game:

My game's goal is ...

My 3 rooms / zones are ...

My trap is ... and my reward is ...

Functions I reuse from my library: ...

Playtest checklist — try your game like a player (or ask a family member to play):

- ☐ Can a player start the game with one chat command?
- ☐ Does every trigger work — trap, goal, messages?

☐ Can a player actually reach the goal and finish?

Send a photo or video of someone playing your game, then explain what you built. Use these sentence starters — write 4 to 6 sentences total.

My game starts when ...

The player has to ...

I reused functions from week ... when ...

One tricky moment was when ...

During playtesting, I found ...

If I had more time, I would ...

My game starts when ...

The player has to ...

I reused functions from week ... when ...

One tricky moment was when ...

During playtesting, I found ...

If I had more time, I would ...

During playtesting, I found ...

If I had more time, I would ...

4 · Record Your Walkthrough

Now take a video on your phone (or a parent's phone) while you play your minigame from start to finish. Talk through it like you are teaching someone who has never seen it. Try to use these words: **goal, trap, reward, event, function**.

1. Type your start command and show what gets built.
2. Walk through each room and say what happens there.
3. Show the trap firing, then show reaching the goal.
4. Say which parts came from your function library and which events make the game react.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
