

M003 Extension 2 — English Worksheet (Beginner)

Topic: Pixel-Art Mob Heads (x, y) · **Course:** 3D Coordinates · **Level:** Extension (Beginner, after Week 3)
· **Time:** about 30 minutes

Another **bonus picture challenge**. You copy a mob head onto your wall using **(x, y)**. x is how far **across**, y is how far **up**. Read the picture and place each block at its (x, y).

First, build your canvas. Run this to make a blank **15 × 15** wall, then put a **red block at your feet** as your **home spot**:

Blocks

Python

```
def on_run():
    blocks.fill(WHITE_CONCRETE,
                pos(1, 1, 0),
                pos(15, 15, 0),
                FillOperation.REPLACE)
    player.on_chat("run", on_run)
```

● **Stand on the red block every time you run.** If you move, the picture moves too and the blocks land in the wrong place. Same spot every time = a clean picture.

1 · Predict 🧠

Read the steps. Before you imagine it happening, circle or write your answer.

```
place green block at (4, 11)
place green block at (5, 11)
place green block at (6, 11)
```

Do these blocks make a line going across? Circle one: across · up

Which number stays the same — x or y?

```
place black block at (6, 6)
place black block at (6, 7)
```

These share $x = 6$ and y grows. Do they go across or up? Circle one: across · up

2 · Find the Difference

Each pair shows the **correct** line first, then a **broken** one. Circle what's different and write one short sentence about the bug.

Pair A — The creeper's two eyes should be at **different** spots: (4, 11) and (10, 11).

```
# correct
place black block at (4, 11)
place black block at (10, 11)
```

```
# broken
place black block at (4, 11)
place black block at (4, 11)
```

What is wrong? Where do both blocks land?

Pair B — The piglin's eye should be at (5, 10).

```
# correct
place dark block at (5, 10)
```

```
# broken
place dark block at (10, 5)
```

What is wrong? Which two numbers got swapped?

3 · Fill the Gap

To move **up** a column, the **second** number (y) has to grow. Fill in the missing numbers so this line goes up at $x = 6$.

```
place black block at (6, 6)
place black block at (6, __)
place black block at (6, __)
```

Word bank for the blanks: 7 · 8

Write the two missing numbers:

home spot (the red block).

Warm up first. Copy this mini creeper face onto your wall. Read each square's (x, y) and place that color there.

● **Mini creeper face**

	1	2	3	4	5
5	■	■	■	■	■
4	■	■	■	■	■
3	■	■	■	■	■
2	■	■	■	■	■
1	■	■	■	■	■

Now build the big  creeper from the main grid below. Read each colored square and place that color at its (x, y).

● Creeper (green · #5dbb52, face · black)

[illegible]

When your picture is finished, send a photo of it, then explain what you did. Use these sentence starters — write 3 to 5 sentences total.

First, I built the ...

The lowest block in my picture is at (x = ..., y = ...).

To go across a row I changed the ... number; to go up I changed the ... number.

The trickiest block to read was ...

If I had more time, I would ...
