

Builder Basics — Complete Your Village (Extension)

Topic: Bring It All Together · **Course:** Builder Basics · **Type:** Extension Activity · **Time:** about 60 minutes

 This is a bonus challenge, not a weekly lesson. Try it after the Week 8 village project, once you can build with loops and move the agent between spots.

1 · The Challenge

Your village has a good start, but a real village needs more than walls. **Complete your village** so it feels like a place someone could live.

By the end, your village must have **all four** of these:

 A house with a roof  A well  A small pond  A small flower bed

There is no fixed size and no map — **you** decide how big each thing is and where it goes. One rule you must not break:

 **Everything must be built with code.** No placing blocks by hand.

What four things must your village have when you finish?

Why do you think we say "build it with code" instead of placing blocks by hand?

2 · Plan Before You Build

A builder plans first. For **each** of the four structures, decide the blocks, the size, and whether you need a loop.

House with a roof — What blocks? How wide and how tall? Where does the roof sit?

Well — What shape is the hole? What goes around the top? Is there water inside?

Small pond — How will you make the dip in the ground? What fills it?

Small flower bed — What holds the soil? How many flowers, and how will you place a row of them?

3 · Think in Loops

You built walls with loops before. A loop is for anything you do **again and again** — a row of wall blocks, a row of flowers, the four sides of a well.

Which of your four structures will use a loop, and what does the loop repeat each time?

Between one structure and the next, the agent has to **walk to a new spot** so nothing lands on top of the last build.

Between the house and the pond, what will the agent do to get to a clean spot?

4 · Show Your Work 📷 🎥

Go to your homework world and build each structure one at a time, moving the agent between them. Keep going until your village has **the house with a roof, the well, the small pond, and the small flower bed** — all placed by code.

Record **one video** (a phone is fine). Show two things:

1 · Your code. Scroll through it. Say what each part does.

2 · Your build. Point the camera. Name the parts.

Fill the blanks:

Today I built _____.

I built it using this code: _____.

In this code I used _____.

The hardest part was _____.

That part was hard because _____.

Write your lines here, then say them in your video.
