

Builder Basics — The Living Village (Extension · Intermediate)

Topic: Bring It All Together · **Course:** Builder Basics · **Level:** Intermediate · **Type:** Extension Activity · **Time:** about 60 minutes

 This is a bonus challenge, not a weekly lesson. Try it after **Complete Your Village**, once you can build with loops, move the agent between spots, and place water and animals.

1 · The Challenge

Make your village feel like a place someone could live and work. There is no map — **you** choose the sizes and places, and it must have **all eight**:

 A **farm** — rows of crops  A **farm house**  A **house with a watchtower**  A **fence** — around the farm or the animals  A **pond with fish**  A **bridge** over the pond  A **well**  A **few animals**

 One rule: **everything you can build is built with code.** No placing blocks by hand. (Animals are spawned.)

Why does building eight things with code beat placing them by hand one block at a time?

2 · Plan the Parts

Fill in the table. For each part, note the main block you will use and whether it needs a loop.

Part	Main block(s)	Loop? (yes / no)
 Farm		
 Farm house		
 Watchtower house		
 Fence		
 Pond with fish		
 Bridge		
 Well		
 Animals		

Pick the two hardest parts to build. What makes each one tricky?

3 · Think in Loops

A loop is for anything you repeat — a row of crops, the four sides of a fence, the planks of a bridge, the levels of a tower.

Choose one part. Describe the loop: what does it repeat, and how many times?

The pond and the bridge go together. Why is it easier to build the pond *first* and the bridge *second*?

Between one part and the next, what must the agent do so builds don't land on top of each other?

4 · Show Your Work 📷 🎥

Go to your homework world and build one part at a time, moving the agent between them. Build the water first, then span the bridge across it — keep going until all **eight** parts are placed by code, plus the animals.

Record **one video** — one take, no stopping (a phone is fine). Show these in order:

1 · Your code. Scroll through it. Say what each part does.

2 · Your build. Point the camera. Name the parts.

Fill the blanks:

Today I built _____.

I built it using this code: ____.

In this code I used _____.

The hardest part was _____.

That part was hard because _____.

The most fun part was _____.

Something new I learned was _____.

Write your lines here, then say them in your video.
