

M002 Extension 3 — Builder Challenge

Topic: Build a Maze + Write the Solution · **Course:** Maze Madness · **Level:** Extension (Intermediate) · **Time:** about 45 minutes

This time **you** make the maze. Build one that runs through **6 zones**, wired with pistons and doors, then write the code that drives the agent to the end.

Open **M002 EXT 3 — Cube World** and build inside it. Chat: **l** turns left, **r** turns right, **run** starts your solver, **rl** sends the agent back to start.

Your maze needs:

- **2 pistons** (each opens a wall when powered)
- **2 doors** (the agent opens them with `agent.interact(...)`)
- **4 AND** conditions in your code (`... and ...`)
- **1 OR** condition in your code (`... or ...`)

1 · Plan Your 6 Zones

Your maze runs through **6 zones** in a row. Give each zone one job: a turn, a piston, or a door.

Zone 1: ...

Zone 2: ...

Zone 3: ...

Zone 4: ...

Zone 5: ...

Zone 6: ...

Which 2 zones get a piston, and what does each open? Which 2 get a door?

2 · Build the Maze

Build it in the world. Walk it yourself first to check a person can reach the end, then tick each part.

- ☐ Zone 1 ☐ Zone 2 ☐ Zone 3 ☐ Zone 4 ☐ Zone 5 ☐ Zone 6
- ☐ Piston #1 tested ☐ Piston #2 tested
- ☐ Door #1 ☐ Door #2
- ☐ A clear START block and GOAL block

What broke while you built it? What did you change?

3 · Write the Solution

Write the solver with a `while True` loop so it checks every step. Your code needs **4 AND** and **1 OR**.

```
while True:
    agent.move(FORWARD, 1)

    # turn only when BOTH are true (AND)
    if agent.detect(BLOCK, LEFT) and agent.detect(REDSTONE, AHEAD):
        agent.turn(LEFT_TURN)

    # a door OR a piston gate (OR)
    elif agent.detect(BLOCK, AHEAD) or agent.detect(REDSTONE, RIGHT):
        agent.interact(AHEAD)
        agent.move(FORWARD, 1)
```

Add more `if` / `elif` until all 6 zones are covered. Mark each one `# AND` or `# OR`.

How many AND checks did you write? How many OR?

4 · Find the Bug

This code should turn left at a junction. It turns at the wrong time.

```
if agent.detect(BLOCK, LEFT) or agent.detect(REDSTONE, AHEAD):  
    agent.turn(LEFT_TURN)
```

The agent should turn only when **both** are true. Write the fixed line.

5 · Show Your Work 📷 🎥

Type **run** and watch. It sticks — find the spot, fix the code or maze, **rl** to reset, then run until it reaches the **GOAL**.

Record **one video** — one take, no stopping (a phone is fine). Show these in order:

1 · Your code. Scroll through it. Say what each part does.

2 · Your build. Point the camera. Name the parts.

Fill the blanks:

Today I built _____.

I built it using this code: _____.

In this code I used _____.

The hardest part was _____.

That part was hard because _____.

The most fun part was _____.

Something new I learned was _____.

Write your lines here, then say them in your video.
