

RB002 Week 4 — English Worksheet

Topic: Branching Dialogue — if / elseif / else · **Course:** Story Quest · **Time:** about 45 minutes

This week your NPC remembers the story. A **boolean** like `questAccepted` holds the quest state, and `if / elseif / else` picks **one** reply that fits the moment.

1 · Predict 🧠

Read each script. Before you imagine running it in Roblox Studio, write what you think will happen.

```
local questAccepted = false

if questAccepted then
    print("Good luck, hero!")
else
    print("Will you help me find my cat?")
end
```

`questAccepted` is false. Which line prints?

```
local questDone = true
local questAccepted = true

if questDone then
    print("You found my cat! Thank you!")
elseif questAccepted then
    print("Did you find my cat yet?")
else
    print("Will you help me find my cat?")
end
```

Both booleans are true. Which ONE line prints? Why only one?

```
local questAccepted = false
local prompt = script.Parent.ProximityPrompt

prompt.Triggered:Connect(function(player)
    if questAccepted then
        print("Did you find my cat yet?")
    else
        print("Will you help me find my cat?")
        questAccepted = true
    end
end)
```

You press E two times. What prints the first time? What prints the second time?

2 · Spot the Bug 🐛

Each script below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The NPC should say only **one** line each talk. Right now, on the first talk, BOTH lines print.

```
local questAccepted = false

if questAccepted == false then
    print("Will you help me find my cat?")
    questAccepted = true
end
if questAccepted == true then
    print("Did you find my cat yet?")
end
```

Hint: two separate `if` blocks both run. You only need one `if ... else ... end`.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The first talk should ask for help. The second talk should say `Did you find my cat yet?`. Right now the NPC asks for help forever.

```

local questAccepted = false
local prompt = script.Parent.ProximityPrompt

prompt.Triggered:Connect(function(player)
    if questAccepted then
        print("Did you find my cat yet?")
    else
        print("Will you help me find my cat?")
    end
end)

```

Hint: the boolean never changes.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — When the quest is done, the NPC should say thank you. Right now the thank-you line never prints, even when `questDone` is true.

```

local questDone = true
local questAccepted = true

if questAccepted then
    print("Did you find my cat yet?")
elseif questDone then
    print("You found my cat! Thank you!")
else
    print("Will you help me find my cat?")
end

```

Hint: the order of the checks matters. The first true check wins.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to your own quest world. Give your NPC branching dialogue: a boolean quest state and `if / elseif / else` so the reply changes as the quest moves forward. When you finish, come back here.

Send a photo or video of the dialogue changing, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

My NPC says ... the first time I talk.

After I accept the quest, my NPC says ...

My boolean is called ... and it starts as ...

I used `elseif` because ...

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough

Now take a video on your phone (or a parent's phone) while you talk to your NPC more than once. Talk through it like you are teaching someone who has never seen it. Try to use these words: **if**, **elseif**, **else**, **boolean**, **quest**.

1. Press E the first time and show the NPC's first reply.
2. Press E again and show that the reply changed.
3. Show your script and read the `if / elseif / else` block out loud.
4. Say in your own words why only **one** line prints each time.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
