

RB005 Week 6 — English Worksheet

Topic: Playtest & Iterate — Find Bugs, Fix Bugs · **Course:** Dream Game Studio · **Time:** about 45 minutes

This week you are a **bug hunter**. Real game studios playtest, write down every bug, fix it, and test again. Your loop is: **see it** → **write the steps** → **fix it** → **retest**.

1 · Predict

A classmate playtested your game and left these complaints. Before you open any script, predict **which script** most likely has the bug, and what is wrong inside it.

Playtester says: *"I touched a coin but my points did not go up."*

Which script would you open first — the coin's Touched script, the menu LocalScript, or the leaderstats script? What would you look for inside it?

Playtester says: *"I touched one coin and got 3 points from it!"*

Which script has the bug? What is the script missing? (Hint: it is something you add so a Touched event cannot fire many times.)

Playtester says: *"The sign says I need 5 coins, but the door opened when I only had 4."*

Which script has the bug? Which exact line would you read carefully, and what number or symbol might be wrong?

2 · Spot the Bug 🐛

Two of these are real code bugs, one is a **design bug** — a bug with no broken code at all. Read what each one is **supposed** to do, then write your fix and explain why it works.

Bug A — Touching a coin should give **exactly 1 point**, then the coin should be gone. Right now one touch can give many points.

```
local coin = script.Parent

coin.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player then
        player.leaderstats.Coins.Value += 1
    end
end)
```

Hint: a debounce variable stops the event from firing again, or you can `coin:Destroy()` after the first point.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The door should open when the player has **5 coins or more**. Playtesters say it only opens at 6.

```

local door = script.Parent

door.Touched:Connect(function(hit)
    local player = game.Players:GetPlayerFromCharacter(hit.Parent)
    if player and player.leaderstats.Coins.Value > 5 then
        door.CanCollide = false
        door.Transparency = 0.7
    end
end)

```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — *Design bug, no broken code.* Every playtester spawns, looks around, and walks the **wrong way**. They say: "*I don't know where to go.*" All your scripts work perfectly.

Write your fix idea (think: signs, arrows, a TextLabel instruction, a glowing path, a camera view of the goal):

Why is this still a bug, even though no script is broken?

3 · Tell Me What You Built 📷

Now playtest your own game (and swap with a classmate online if you can — watch them play, do not help them!). Hunt for at least 3 bugs and log them in the table. A "bug" can be a code bug OR a design bug.

#	What happened?	Steps to make it happen	My fix idea	Fixed? 
1				
2				
3				

Send a photo or video of your game after the fixes, then explain your bug hunt. Use these sentence starters — write 4 to 6 sentences total.

The worst bug I found was ...

To make it happen again, I had to ...

I fixed it by ...

When I retested, ...

My playtester was confused when ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) showing **one bug before and after the fix**. Talk through it like you are teaching someone who has never seen it. Try to use these words: **bug, reproduce, debounce, fix, retest**.

1. Show the bug happening. Say the steps to reproduce it out loud.
2. Open the script and point at the broken line (or show the confusing place in your map for a design bug).
3. Show your fix and read the changed line out loud.
4. Retest on camera and show that the bug is gone.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
