

WD001 Week 1 — English Worksheet

Topic: HTML Basics — The Skeleton of a Page · **Course:** Web Design: CSS · **Time:** about 45 minutes

This week you build the **skeleton** of a web page with HTML. Every page is made of **tags**. Most tags come in pairs — an **opening tag** like `<p>` and a **closing tag** like `</p>` — and your text goes in between.

1 · Predict 🧠

Read each bit of HTML. Before you imagine the browser drawing it, write what you think will show up on the screen.

```
<h1>My Pets</h1>
<p>I have a cat named Coco.</p>
```

What appears on the page? Which line looks bigger, and why?

```
<p>I love pizza
<p>I love games
```

These paragraphs are missing their closing `</p>` tags. Do you think the browser still shows the text? What might look messy?

```
<body>
  <h1>Welcome</h1>
  
  <p>This is my dog.</p>
</body>
```

Describe in plain English what shows up, from top to bottom.

```
<h1>Hello</h1>
```

`<img>` does not need a closing tag, but `<h1>` does. What do you think happens if you forget `</h1>`? Write your guess, then test it later.

2 · Spot the Bug 🐛

Each bit of HTML below was meant to do something, but it is broken. Read what it is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — This is supposed to be one big heading that says **About Me**.

```
<h1>About Me</p>
```

Hint: the opening and closing tags should match.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — This is supposed to show a photo named `me.jpg`.

```
<img scr="me.jpg">
```

Hint: read the attribute name out loud, letter by letter.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — This is supposed to be a heading **and then** a paragraph. Right now everything ends up inside the heading.

```
<h1>My Hobbies  
I like drawing and coding.</h1>
```

Hint: the paragraph needs its own tags.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Build Your About Me Page 📷

Open Replit and start a new HTML project. Build an **About Me** page with these parts:

1. a big heading with your name (`<h1>`),
2. a paragraph with **3 things you like** (`<p>`),
3. one photo of you or something you like (`<img>`).

You can build it like this and change the words to be about you:

```
<!DOCTYPE html>
<html>
<head>
  <title>About Me</title>
</head>
<body>
  <h1>Hi, I'm ____</h1>
  <p>I like ____, ____, and ____.</p>
  
</body>
</html>
```

When you finish, send a **photo or video** of your page (or a picture of your code), then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I made the page with ...

My `<h1>` says ...

The three things I put in my paragraph were ...

I added a photo by ...

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough

Now take a video on your phone (or a parent's phone) while you show your page. Talk through it like you are teaching someone who has never seen HTML. Try to use these words: **tag**, **heading**, **paragraph**, **image**, **browser**.

1. Show your finished page in the browser.
2. Point to your `<h1>` and read it out loud.
3. Point to your `<p>` and say what is inside.
4. Show one tag you got wrong at first and how you fixed it.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
