

WD001 Week 4 — English Worksheet

Topic: Flexbox — Lining Things Up Horizontally · **Course:** Web Design: CSS · **Time:** about 45 minutes

This week you put boxes **side by side**. One line — `display: flex` — makes the children of a box line up in a row. Then `justify-content` spreads them across, `align-items` lines them up top-to-bottom, and `gap` adds space between them.

1 · Predict 🧠

Read each bit of CSS. Before you imagine the browser drawing it, write what you think will happen.

```
<style>
  .row {
    display: flex;
    gap: 20px;
  }
</style>
```

The `.row` holds three cards. After `display: flex`, are the cards stacked on top of each other or side by side?

```
<style>
  .row {
    display: flex;
    justify-content: center;
  }
</style>
```

Where do the cards sit — on the left, in the middle, or spread out?

```
<style>
  .row {
    display: flex;
    justify-content: space-between;
  }
</style>
```

space-between with three cards. Where does the empty space go?

```
<style>
  .menu {
    display: flex;
    gap: 24px;
  }
</style>
```

The **.menu** holds three links: Home, About, Contact. What does the menu look like now?

2 · Spot the Bug 🐛

Each bit of CSS below was meant to do something, but it is broken. Read what it is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The three cards are supposed to line up in a row, but they are still stacked on top of each other.

```
<style>
  .row {
    flex;
    gap: 16px;
  }
</style>
```

Hint: `flex` is the **value**. What is the property name?

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The cards are in a row but jammed together with no space. There should be a gap.

```
<style>
  .row {
    display: flex;
    gap 16px;
  }
</style>
```

Hint: something is missing between the property and the value.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — `justify-content` is on the wrong box. It was written on a single card instead of on the row that holds the cards.

```
<div class="row">
  <div class="card" style="justify-content: center;">A</div>
  <div class="card">B</div>
  <div class="card">C</div>
</div>
```

Hint: `justify-content` belongs on the **flex container** (the `.row`), not on a child.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Build a Menu and a Card Row 📷

In Replit, work on the page you have been building. Add two things:

1. a **navigation menu** with links (Home, About, Contact, and at least one more of your own),
2. your **3 cards from last week lined up in a row** using Flexbox.

You can start your menu like this and change the words and colours:

```
<div class="menu">
  <a href="#">Home</a>
  <a href="#">About</a>
  <a href="#">Contact</a>
</div>

<style>
  .menu {
    display: flex;
    justify-content: center;
    gap: 24px;
    background-color: #1a3a52;
    padding: 16px;
  }
  .menu a {
    color: #ffffff;
    text-decoration: none;
    font-size: 18px;
  }
</style>
```

Try changing `justify-content` to `center`, then `space-between`, and notice the difference.

When you finish, send a **photo or video** of your menu and card row (or a picture of your code), then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

The links in my menu are ...

I used `display: flex` to ...

When I tried `space-between`, the cards ...

The **gap** did ...

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while you show your menu and cards. Talk through it like you are teaching someone who has never seen Flexbox. Try to use these words: **flex**, **row**, **justify-content**, **gap**, **align**.

1. Show your menu and your row of cards in the browser.
2. Read your `display: flex` line out loud and say what it does.
3. Change `justify-content` live and say what moves.
4. Show one thing you got wrong at first and how you fixed it.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
