

WD001 Week 7 — English Worksheet

Topic: Hover Effects and Animations · **Course:** Web Design: CSS · **Time:** about 45 minutes

This week you make your page **feel alive**. `:hover` adds a style that only shows when the mouse is on top of something. `transition` makes the change smooth instead of sudden, and `transform: scale()` grows an element a little. Together they make buttons and cards that react when you point at them.

1 · Predict 🧠

Read each bit of CSS. Before you imagine the browser drawing it, write what you think will happen.

```
<style>
  .btn {
    background-color: red;
  }
  .btn:hover {
    background-color: blue;
  }
</style>
```

What colour is the button normally? What colour when the mouse is on it?

```
<style>
  .card:hover {
    transform: scale(1.2);
  }
</style>
```

`scale(1.2)` on hover. Does the card get bigger or smaller when you point at it?

```
<style>
  .btn {
    background-color: red;
    transition: background-color 1s;
  }
  .btn:hover {
    background-color: blue;
  }
</style>
```

With `transition: background-color 1s` , does the colour change instantly or fade slowly?

```
<style>
  .card:hover {
    transform: scale(0.8);
  }
</style>
```

`scale(0.8)` is less than 1. What do you think happens to the card on hover?

2 · Spot the Bug 🐛

Each bit of CSS below was meant to do something, but it is broken. Read what it is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The button is supposed to change colour when you point at it, but it never changes.

```
<style>
  .btn hover {
    background-color: green;
  }
</style>
```

Hint: `:hover` attaches to the selector in a special way.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The card is supposed to grow **smoothly** on hover, but it snaps to the bigger size instantly.

```
<style>
  .card:hover {
    transform: scale(1.1);
  }
</style>
```

Hint: which property makes a change happen smoothly over time, and where should it go?

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The button is supposed to get slightly bigger on hover, but instead it disappears or breaks.

```
<style>
  .btn:hover {
    transform: scale;
  }
</style>
```

Hint: `scale` needs a number to know how much to grow.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Build 3 Hover Cards 📷

In Replit, build **3 cards with hover effects**, and make each card react **differently**. For example: one changes colour, one grows a little, one gets a shadow. Use **transition** so the change is smooth.

You can start from this button and use the same idea on your cards:

```
<button class="btn">Click Me</button>

<style>
  .btn {
    background-color: #d4380d;
    color: #ffffff;
    padding: 12px 24px;
    border: none;
    border-radius: 8px;
    font-size: 18px;
    cursor: pointer;
    transition: transform 0.2s, background-color 0.2s;
  }
  .btn:hover {
    background-color: #b32d09;
    transform: scale(1.05);
  }
</style>
```

Try your transition at **0.1s** , **0.5s** , and **1s** , and keep the speed that feels most natural to you.

When you finish, send a **video** (hover effects are easier to see in a video) or a picture of your code, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

My three hover effects are ...

I made the change smooth by using ...

I tried the transition at ___ and kept ...

```
transform: scale() did ...
```

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough

Now take a video on your phone (or a parent's phone) while you hover over your cards. Talk through it like you are teaching someone who has never made a hover effect. Try to use these words: **hover**, **transition**, **scale**, **smooth**, **effect**.

1. Show all three cards, then hover over each one.
2. Read one **:hover** rule out loud and say what it changes.
3. Point out which card changes colour, which grows, and which gets a shadow.
4. Show one thing you got wrong at first and how you fixed it.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
