

WD003 Week 1 — English Worksheet

Topic: Brand Kit + Wireframe — Plan Before You Build · **Course:** Portfolio Site · **Time:** about 60 minutes

This week there is **no code yet**. Real designers do two things before they touch a computer: they decide how the site should **feel** (a **brand kit**) and they decide what goes **where** (a **wireframe**). You will do both, on paper. Planning first means less getting lost later.

A portfolio site usually has these sections: **Hero**, **About**, **Projects**, **Contact**, and a **Footer**. You will arrange them, then decide what *yours* says about *you*.

1 · Predict 🧠

Read each plan below. Before you imagine the page, write what you think a visitor would see.

```
[ Nav: Home / About / Projects / Contact ]  
[ Hero: my name + one line ]  
[ About: photo + a few sentences ]  
[ Projects: 3 cards ]  
[ Contact: a form ]  
[ Footer ]
```

A visitor lands at the top and scrolls down. List, in order, what they see.

```
[ Hero ]  
[ Contact ]  
[ About ]  
[ Projects ]
```

This site puts Contact second, right after the Hero. Is that a good first impression? What would a visitor know about this person before they are asked to send a message?

```
[ Nav: Home / About / Projects / Contact ]  
[ Hero ]  
[ About ]
```

The nav menu has four links, but the page only has a Hero and an About section. What happens when a visitor clicks "Projects"?

2 · Spot the Bug 🐛

Each plan below was meant to do something, but it does not quite work yet. Read what the plan is **supposed** to do, then rewrite it so it makes sense. After that, explain why the original was a problem.

Bug A — This wireframe is supposed to introduce the person *before* showing their work. Right now the Projects come before anyone knows who made them.

```
[ Hero ]  
[ Projects ]  
[ About ]  
[ Contact ]
```

Write the fixed order:

Why was the original order a problem? Why does your order work better?

Bug B — A wireframe is supposed to use **boxes and labels only** — no colors, no finished text, no real photos. This one has jumped ahead.

```
[ Hero: bright orange background, font is "Pretendard Bold 64px",  
  exact paragraph already written out, real photo placed ]
```

Hint: a wireframe decides *position*, not *paint*. Strip it back.

Write a proper wireframe label for the Hero:

Why is it better to leave the colors and final text for later?

Bug C — Every section is supposed to have a clear **label** so you know what it is for. This plan has a mystery box.

```
[ Nav ]
[ Hero ]
[ ??? ]
[ Footer ]
```

Hint: name the box, and say what one thing it shows.

Write the fixed plan:

Why does naming every box now save you trouble later?

3 · Design Your Brand Kit 🎨

A **brand kit** is a small set of choices that make everything you build look like *you* made it. Big companies have one. Now you do too. Work through these steps on one sheet of paper — that page becomes your brand kit.

1. **Pick three words** that describe you (for example: *curious, funny, calm*). Every choice after this should match your words.
2. **Choose your colors.** Pick one main color and one background color that fit your three words. A calm person and a loud person should not end up with the same colors.
3. **Choose your font style.** You do not need a font name yet — just decide: rounded or sharp? thick or thin? Write a small sample of your name in that style.
4. **Write your name the way it will appear at the top of your site.** That is your logo for now.

Stuck for ideas? Designers share their work on sites like **dribbble.com** and **pinterest.com** — searching "portfolio website" there shows you hundreds of real designs, and noticing what you like trains your eye. One caution: these sites are the open internet, and anyone can post anything, so you may run into things that are off-topic or not for kids. Stay on your search, and if something looks wrong, close it and move on. And remember — you are there to get *inspired*, not to copy someone's design box for box.

Write your brand kit below too: your three words, your colors, your font style.

4 · Draw Your Wireframe

Now decide what goes where. On paper, sketch your site as a column of boxes — one box per section, in the order a visitor will see them.

A good wireframe follows these rules:

Boxes and labels only. No colors, no real photos, no finished sentences — that all comes later.

Name every box. A box nobody can name is a box nobody needed.

One short note per box saying what it shows — "3 project cards", "photo + intro".

Neat enough that a stranger could read it. If someone else picked up your paper, could they tell what each part of your site is? That is the test.

Sketch your Hero, About, Projects, Contact and Footer, then explain your plan. Use these sentence starters — write 4 to 6 sentences total.

The three words I picked for myself are ...

I chose these colors because ...

My Hero section will say ...

In my About section, I want to tell visitors ...

The hardest part of planning was ...

If I had more time, I would add ...

5 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) and walk through your plan. Talk through it like you are showing someone what your finished site *will* look like. Try to use these words: **brand kit**, **wireframe**, **section**, **Hero**, **layout**.

1. Hold up your brand kit. Read your three words and say why your colors fit them.
2. Hold up your wireframe and point to each section from top to bottom.
3. Say which section you are most excited to build.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
