

Extra — CSS Colors & Text Styling

Topic: Selectors, Colors & the Box Model · **Course:** Extra Worksheet · **Time:** about 30 minutes

CSS picks a part of the page with a **selector**, then changes it with a **property** and a **value**. On paper you will read CSS, predict it, fix it, and explain it in your own words.

Keep these words handy: **selector**, **property**, **value**, **padding**, **border**, **margin**.

1 · Predict 🧠

Read each snippet. Write what you think the page will look like.

```
<style>
  h1 { color: blue; }
</style>
<h1>My Profile</h1>
```

What color is the heading? What does the **h1** before the **{** pick?

```
<style>
  .note { background-color: #fef9c3; }
</style>
<div class="note">Revise CSS selectors.</div>
<div class="note">Practice the box model.</div>
<div>Feed the cat.</div>
```

How many boxes turn yellow? Why?

```
<style>
  h1 {
    font-size: 36px;
    text-align: center;
  }
</style>
<h1>My Study Notes</h1>
<p>Today I learned about CSS.</p>
```

Which line moves to the middle of the page, the **h1** or the **p** ? Why?

2 · Spot the Bug 🐛

Each snippet is broken. Read what it should do, then rewrite it so it works. Explain why the original was wrong.

Bug A — This should turn the heading blue. Nothing changes.

```
h1 { color blue; }
```

Hint: every property needs a `:` between it and its value.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — This should turn `<div class="note">` yellow. It stays white.

```
note { background-color: #fef9c3; }
```

Hint: a class selector starts with a dot.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — This should make the title 32 pixels tall. The size does not change.

```
h1 { font-size: 32; }
```

Hint: a size needs a unit.

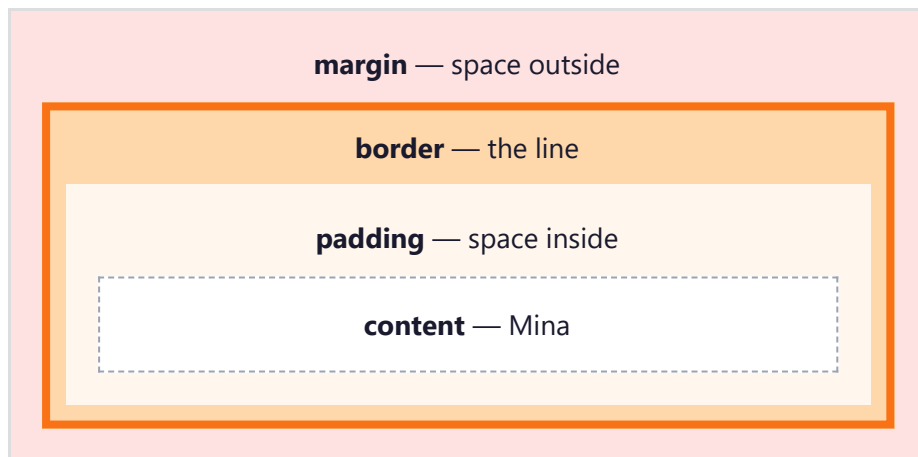

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Explain the Code 📖

This is the finished profile card from your lesson.

```
<style>
  #card {
    width: 300px;
    background-color: #fff7ed;
    padding: 24px;
    border: 3px solid #f97316;
    margin: 40px auto;
  }
</style>
<div id="card">
  <h1>Mina</h1>
  <p>Loves coding and cats.</p>
</div>
```

What does `#card` pick? How would `.card` be different?

`padding: 24px` and `margin: 40px auto` both add space. Which space is inside the border?

In `margin: 40px auto` , what does `auto` do to the card sideways?
