

M000 Week 8 — English Worksheet

Topic: Build a Village (Final Project) · **Course:** Builder Basics · **Time:** about 60 minutes

1 · Predict 🧠

Read each set of steps. Before you imagine the agent doing it, write what you think will happen.

```
set size to 5
set height to 3

repeat height times:
  repeat 4 times:
    repeat size times:
      place block down
      move forward
    turn right
  move up by 1
```

Which part of the village is this — house, well, or farm house?

```
repeat 4 times:
  repeat 3 times:
    place block down
    move forward
  turn right
repeat 3 times:
  destroy block down
  move down by 1
```

Which part of the village is this?

```
# Stage 1
[house walls + roof]
# Stage 2
move to next spot
[well]
# Stage 3
move to next spot
[farm house]
```

This is the skeleton for the whole village. What does the agent need between each stage?

2 · Spot the Bug 🐛

Each block of code below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The village should have **a house with a roof, a well, and a farm house** — three structures, side by side.

```
# House
[house walls + roof code]
# Well
[well code]
```

Hint: something is missing. Rewrite the skeleton to include all three structures.

Write the fixed skeleton:

What was missing? Why does the full version work?

Bug B — Between each structure, the agent must **walk to a new spot** so the next structure doesn't land on top of the last one.

```
# House
[house walls + roof]
# Well
[well code]
# Farm house
[farm house code]
```

Hint: add the missing "move to next spot" steps. You don't need to write the full house/well/farm code — write where the agent should walk between stages.

Write the fixed skeleton:

Why was the original wrong? Why does your fix work?

Bug C — The house roof should sit on top of the walls, but in this code the agent stays on the ground after the walls.

```
repeat height times:
    repeat 4 times:
        repeat size times:
            place block down
            move forward
        turn right
# now place the roof
repeat size times:
    repeat size times:
        place block down
        move forward
```

Hint: the agent finishes the walls on the ground. Where should it go before placing the roof?

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to your homework world. Build your village — **a house with a roof, a well, and a farm house** at minimum. If you have time, add a standalone farm too. When you finish, come back here.

Send a photo or video of your whole village, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I built the ...

Then I built the ...

To move between structures, the agent ...

I used a nested loop for ...

The hardest part was ...

The thing I am most proud of is ...

4 · Record Your Walkthrough

Now take a video on your phone (or a parent's phone) while you walk the camera through your village. Talk through it like you are teaching someone who has never seen it. Try to use these words: **village, house, roof, well, farm house.**

1. Walk around the village and show each building one by one.
2. For each building, read the loops out loud and say what stage they are.
3. Show one bug you hit and how you fixed it.
4. Say what you would add next if you had more time.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.

Submit 

Send this worksheet + your walkthrough video to teacher on KakaoTalk. This is the **last week** of Builder Basics — well done!
