

AI001 Week 6 — English Worksheet

Topic: Debugging — Explaining Errors to AI · **Course:** AI Coding with Replit Agent · **Time:** about 45 minutes

When your code breaks, telling the AI **"it doesn't work"** is not enough. A good bug report gives three things: **what you tried to do**, **what you expected**, and **what actually happened** — plus the exact error message, copied word for word.

1 · Predict 🧠

Read each bug report. Before the AI reads it, decide whether the AI has enough information to help — and what is missing.

```
It doesn't work. Fix it.
```

Does the AI know what "it" is, or what "work" should look like? What is missing?

```
When I click the button, the score should go up,  
but nothing happens.
```

This says what you tried and what you expected. What one more thing would make it even better?

```
When I click the button the score should go up but nothing  
happens. The console shows:  
Uncaught TypeError: Cannot read property 'textContent' of null  
at index.js:7
```

Why does pasting the exact error message help the AI find the bug fast?

2 · Fix the Bug Report 🐛

Each bug report below is missing one of the three parts (what you tried / what you expected / what actually happened) or the error message. Read the situation, then rewrite the report so the AI can help.

Report A — A button is supposed to **show a message** when clicked, but the page does nothing. The student typed:

The button is broken.

Hint: add what you expected ("a message should appear") and what actually happened ("nothing happens when I click").

Write a clear bug report:

What parts did you add?

Report B — The page shows a red error in the console, but the student only wrote:

There's an error somewhere.

Hint: copy the exact error message and the line number into the report.

Write a clear bug report (you can invent a sample error message):

Why does the exact message matter?

Report C — A box was supposed to **stay hidden** until clicked, but it shows the whole time — the opposite of what was wanted.

The box is wrong.

Hint: explain the opposite situation clearly: "it should be hidden at first, but it is always showing."

Write a clear bug report:

Why is describing the "opposite" situation helpful?

3 · Debug Something Real 📷

Open one of your earlier projects and find a part that does not work the way you want (or ask the AI to add a feature that breaks something). Write a clear bug report with all three parts plus the error message, and let the AI fix it. Then ask: **"What did you change to fix it?"**

When you finish, send a **photo or video** of the before and after, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

The thing that was broken was ...

I expected it to ... but instead it ...

The error message said ...

The AI fixed it by ...

In my own words, the bug was ...

Next time I hit a bug, I will ...

4 · Explain the Fix in Your Own Words

The AI told you what it changed. Now write it **in your own words** — like you are explaining to a friend who has never coded. Do not copy the AI's words exactly.

Submit 

Send this worksheet + a before/after photo (or video) + your own explanation to teacher on KakaoTalk.
