

RB002 Week 2 — English Worksheet

Topic: Strings — Talking Code · **Course:** Story Quest · **Time:** about 45 minutes

This week your code starts **talking**. You join strings together with `..` to build messages, and you greet every player by name when they join your world.

1 · Predict

Read each script. Before you imagine running it in Roblox Studio, write what you think will happen.

```
local name = "Mina"
print("Welcome, " .. name .. "!" )
```

What exactly prints in the Output window? Where does the name go?

```
local first = "Story"
local second = "Quest"
print(first .. second)
```

Is there a space between the two words? What exactly prints?

```
local Players = game:GetService("Players")

Players.PlayerAdded:Connect(function(player)
    print("Welcome, " .. player.Name .. "!" )
end)
```

When does this print — right away, or when something happens? If a player named Jiho joins, what prints?

2 · Spot the Bug 🐛

Each script below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The script should print `Hello, Mina!`. Right now Studio shows a red error and nothing prints.

```
local name = "Mina"
print("Hello, " name "!")
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The script should print `Welcome to the Dark Forest`. Right now two words stick together: `Welcome tothe Dark Forest`.

```
local placeName = "the Dark Forest"
print("Welcome to" .. placeName)
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The script should greet every player by name when they join. Right now Studio shows an error instead.

```
local Players = game:GetService("Players")

Players.PlayerAdded:Connect(function(player)
    print("Welcome, " + player.Name + "!")
end)
```

Hint: in Luau,  is only for numbers.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to your own quest world. Add a script that greets every player by name when they join, and at least one more message built with `..`. When you finish, come back here.

Send a photo or video of your messages in the Output window, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

My world says ... when a player joins.

I used `..` to join ...

player.Name gives me ...

One tricky moment was when ...

To fix it, I ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while you test your world. Talk through it like you are teaching someone who has never seen it. Try to use these words: **string**, **join**, **variable**, **player**, **message**.

1. Show your script, then press Play and show the welcome message in the Output window.
2. Read your `print` line out loud and point at each `..`.
3. Say what `player.Name` is and where your name appears in the message.
4. Say in your own words what `..` does to two strings.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
