

RB002 Week 8 — English Worksheet

Topic: Ship It — Publish & Present · **Course:** Story Quest · **Time:** about 45 minutes

This week you **ship** your quest. Publish it to Roblox (File → Publish to Roblox), give it a clear name, description, and icon, set it to **Public** in Game Settings → Permissions, and present it like a real game developer.

1 · Predict 🧠

This week you read **your own scripts**. Open your Story Quest game in Roblox Studio, find each kind of line, and answer.

```
print("Elder: Welcome, " .. player.Name .. "!")
```

Find a line in YOUR NPC script that uses `player.Name`. If your friend Mina plays your published game, what exactly will the NPC say to her?

```
local questDone = false
```

Find YOUR quest-state variable. What is its value when the game starts? Which line changes it, and at what moment in the quest?

```
giveReward(player, 100)
```

Find YOUR reward call. What are the two arguments? What would change for the player if you wrote 500 instead?

2 · Spot the Bug 🐛

These are **launch-checklist** problems. Each game below is about to ship, but something is broken. Read what is **supposed** to happen, write the fix, then explain why the original was wrong and why your fix works.

Bug A — Your friend should be able to join your game. Instead Roblox tells her she cannot play it.

```
Game Settings → Permissions → Private ✓
```

Write the fix (what do you change, and where?):

Why was it wrong? Why does your fix work?

Bug B — Players should be able to **finish** the quest. The world only has 5 crystals, but the NPC script asks for more.

```
elseif crystals.Value >= 10 then
    questDone = true
    giveReward(player, 100)
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — When the quest finishes, the player should **see** that it is done. Right now the coins go up silently and players feel lost.

```
elseif crystals.Value >= 5 then
    questDone = true
    giveReward(player, 100)
end
```

Hint: add an ending message — a `print` or a label line like `"Quest complete!"`.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now publish your game: File → Publish to Roblox, then in Game Settings add a name, a description, and an icon, and set Permissions to **Public**. Play it once from the Roblox app or website — not Studio. When you finish, come back here.

Send a photo or video of your game page on Roblox, then write your **presentation plan**. Use these sentence starters — write 4 to 6 sentences total.

My game is called ... and the quest story is ...

The hardest bug I had was ...

I fixed it by ...

My favorite script is ... because ...

I set my game to Public so that ...

In my next update, I will ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) and **present your game** like a real developer. Talk through it like you are showing it at a game show. Try to use these words: **publish, public, description, quest, update**.

1. Show your game page on Roblox — say the name and read your description out loud.
2. Play your quest from start to finish: talk to the NPCs, collect the items, get the reward.
3. Tell the story of your quest in your own words.
4. Open your favorite script in Studio and read it out loud. Say why you like it.
5. Say one idea for your next update.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.

Submit ✓

Send this worksheet + your walkthrough video to teacher on KakaoTalk.
