

RB004 Week 8 — English Worksheet

Topic: Ship It — Publish & Playtest Party · **Course:** Arena Legends · **Time:** about 45 minutes

This is launch week. You **publish** your arena, make it **Public**, and join the class **playtest party** — everyone plays everyone's arena. Light code this week: you read **your own** round loop and get your game ready for real players.

1 · Predict 🧠

These are pieces of a round loop like yours. For each one, **find the matching part in YOUR script** and answer about your own game.

```
status.Value = "Intermission..."
task.wait(10)
```

Find your intermission. How many seconds is YOUR intermission? What do players see on screen while they wait?

```
if points.Red >= Settings.WinScore then
    status.Value = "Red team wins!"
end
```

Open YOUR Settings ModuleScript. What is your WinScore ? How many points does Blue need to win in your game?

```
for i = Settings.RoundLength, 0, -1 do
    timeLeft.Value = i
    task.wait(1)
end
```

What is YOUR **RoundLength** ? About how long is one full round of your game, intermission included?

2 · Spot the Bug 🐛

These are not script bugs — they are **launch checklist** bugs. Each setting below would ruin the playtest party. Read what it is **supposed** to be, write the fixed setting, and explain why it matters.

Bug A — At the playtest party, your whole class should be able to join your arena **at the same time**.

```
File → Game Settings → Options
Maximum Player Count: 1
```

Write the fixed setting:

Why was it wrong? Why does your fix work?

Bug B — This SpawnLocation is supposed to be for the **Red team only**. Right now players from both teams appear on it.

```
SpawnLocation → Properties
Neutral: ☒ true
TeamColor: Bright red
```

Write the fixed setting:

Why was it wrong? Why does your fix work?

Bug C — Your classmates click your game link... and Roblox says they can't join.

```
File → Game Settings → Permissions  
Playability: Private
```

Hint: after changing this, you still need to publish again so the change goes online.

Write the fixed setting:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now publish your arena: **File** → **Publish to Roblox**, then Game Settings → Permissions → **Public**. Join the class playtest party and play your classmates' arenas too. When you finish, come back here.

Send a photo or video of your published game page or classmates playing in your arena, then write your **presentation plan** for class. Use these sentence starters — write 4 to 6 sentences total.

My game mode is ...

The hardest multiplayer bug I fixed was ...

My favorite script in my game is ... because ...

One balance decision I made was ... (speed, win score, round length, power-up spots)

When my classmates played my arena, ...

If I made Arena Legends 2, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) — this one is your **launch trailer + presentation**. Talk through it like you are showing your game to a new player. Try to use these words: **publish, Public, server, round, balance**.

1. Show your game page on Roblox and say its name. Show that it is Public.
2. Join your game and play part of a round: spawn, score, power-up, winner message.
3. Tell us the hardest multiplayer bug you fixed and how you fixed it.
4. Show your favorite script and read one line of it out loud.
5. Explain one balance decision — why those numbers?

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
