

★ RS004 Week 14 — English Worksheet

Topic: Vertical Patrol + Death Effect (Apply) · **Course:** Platformer Game · **Time:** about 45 minutes

This week is about thinking through **smarter enemies** and explaining how they work. A `patrol_type` lets one enemy walk left–right, another go up–down, and a third **chase** the player. When the player dies, a little **explosion** of particles bursts out. You will read this code closely and explain the code you wrote in your live lesson.

💬 Words to know: `patrol_type`, **vertical**, **chase**, **particle**, **explosion**.

1 · Predict 🧠

Read each snippet. Write what you think it does.

```
if self.patrol_type == "vertical":
    self.rect.y += self.direction * self.speed
    if self.rect.y > self.start_y + self.range_size:
        self.direction = -1
    if self.rect.y < self.start_y:
        self.direction = 1
```

Which way does this enemy move? When does it turn around?

```
elif self.patrol_type == "chase" and player_rect is not None:
    if self.rect.x < player_rect.x:
        self.rect.x += 1
    elif self.rect.x > player_rect.x:
        self.rect.x -= 1
```

The player is to the *right* of this enemy. Which way does it move?

```
for p in self.particles:  
    p["x"] += p["vx"]  
    p["y"] += p["vy"]  
    p["vy"] += 0.3  
    p["life"] -= 1
```

Each particle has its own speed. Why does `vy` keep growing (`+= 0.3`)?

2 · Pick the Patrol 🕸️

Match each `patrol_type` to its behaviour.

1. "horizontal" 2. "vertical" 3. "chase"

- A. moves up and down between two heights
- B. follows the player when nearby
- C. walks left and right between two x positions

1 → __ 2 → __ 3 → __

3 · Spot the Bug 🐛

Each snippet is broken. Rewrite it so it works, then explain why the original was wrong.

Bug A — A vertical enemy should bounce between two heights. Right now it floats up forever and leaves the screen.

```
if self.patrol_type == "vertical":  
    self.rect.y += self.direction * self.speed
```

Hint: there is no turn-around check on the y edges.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — A chasing enemy needs the player's position. Right now it crashes with a `NoneType` error.

```
def update(self):  
    if self.patrol_type == "chase":  
        if self.rect.x < player_rect.x:  
            self.rect.x += 1
```

Hint: `player_rect` must be passed in, with a safe default, and used only when it exists.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — Dead particles should be removed so the explosion fades. Right now they pile up and slow the game down.

```
for exp in explosions:
    exp.update()
    exp.draw(screen)
```

Hint: when an explosion `is_done()`, take it out of the list. Loop over a copy while removing.

Write the fixed code:

Why was it wrong? Why does your fix work?

4 · Explain the Code

Here is a working enemy update that handles all three patrol types and takes the player's position safely.

```
def update(self, player_rect=None):
    if self.patrol_type == "horizontal":
        self.rect.x += self.direction * self.speed
        if self.rect.x > self.start_x + self.range_size:
            self.direction = -1
        if self.rect.x < self.start_x:
            self.direction = 1

    elif self.patrol_type == "vertical":
        self.rect.y += self.direction * self.speed
        if self.rect.y > self.start_y + self.range_size:
            self.direction = -1
        if self.rect.y < self.start_y:
            self.direction = 1

    elif self.patrol_type == "chase" and player_rect is not None:
        if self.rect.x < player_rect.x:
            self.rect.x += 1
        elif self.rect.x > player_rect.x:
            self.rect.x -= 1
```

What does `self.direction = -1` do, and when does it happen?

Why does the `vertical` block change `self.rect.y` instead of `self.rect.x`?

Why does the `chase` block check `player_rect is not None` before using it?

What would break if you deleted the `start_x` and `start_y` checks?

Tell the story of one chase frame: the player is to the left, so what happens line by line?

5 · Explain Your Lesson Code 🎥

In your live lesson today you wrote enemy and explosion code. Make a short phone video that explains **the code you wrote**. You may show it running. Try to use these words: **patrol_type**, **vertical**, **chase**, **particle**, **explosion**.

1. Point to where `patrol_type` decides how each enemy moves.
2. Read your chase code out loud and explain how it picks a direction.
3. Show the death **explosion** and explain how the **particle** loop works.
4. Say one part that was tricky and how you understood it.

Write what you will say in your video. Plan it here before you record.
