

AI001 Week 5 — English Worksheet

Topic: Iteration — The First Result Is Never Final · **Course:** AI Coding with Replit Agent · **Time:** about 45 minutes

The AI's first try is almost never perfect — and that is normal. This week you learn to **iterate**: instead of deleting everything and starting over, you say "change just this one part." Good iteration prompts are specific and often include "keep this part the same."

1 · Predict

Read each iteration prompt. Before the AI changes anything, write what you expect to change — and what should stay the same.

```
This is bad. Start over.
```

What happens to the parts you already liked? Is starting over a good idea here?

```
Change the bottom 'submit' button from orange to green.  
Leave everything else the same.
```

Which part changes? Which parts stay? Why is "leave everything else the same" useful?

```
Make the title bigger and brighter, and move the menu  
to the top. Keep the photo where it is.
```

List every change this asks for, and the one thing it protects.

2 · Spot the Weak Prompt 🐛

Each iteration prompt below is too vague or too risky. Read what the student **wanted**, then rewrite it so the AI changes exactly the right thing.

Prompt A — The student liked the page but wanted the **title color brighter**. They typed:

Make it better.

Hint: "better" tells the AI nothing. Name the exact part and the exact change.

Write a clear iteration prompt:

Why was the first one risky?

Prompt B — The student wanted **two cards merged into one**, but everything else kept.

Fix the cards.

Hint: say which cards and what "fix" means. Protect the rest.

Write a clear iteration prompt:

Why was the first one risky?

Prompt C — The student liked the hero section a lot, but the AI keeps changing it on every edit.

Make the footer dark.

Hint: this prompt is fine, but add a line that protects the hero section so the AI stops touching it.

Write an improved iteration prompt:

Why does protecting a part help?

3 · Iterate on a Project 📷

Open one of your earlier projects (or build a quick one). Write **several** "change just this part" prompts to raise its quality. After each one, look at the result before writing the next.

When you finish, send a **photo or video** of the improved project, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

I started with a project that ...

My first change prompt asked the AI to ...

I kept one part the same by saying ...

One change did not work, so I ...

The project got better because ...

If I had more time, I would ...

4 · Log Your Changes

Write each iteration prompt you used, with **one line** saying what it changed. This log is part of your homework.

Change 1 — prompt: ... → it changed: ...

Change 2 — prompt: ... → it changed: ...

Change 3 — prompt: ... → it changed: ...

Change 4 — prompt: ... → it changed: ...

Change 5 — prompt: ... → it changed: ...

Submit 

Send this worksheet + a photo (or video) of your improved project + your change log to teacher on KakaoTalk.
