

WD001 Week 3 — English Worksheet

Topic: The Box Model — Padding, Margin, Border · **Course:** Web Design: CSS · **Time:** about 45 minutes

This week you learn that **every element is a box**. Around the content there is **padding** (space **inside** the box), then a **border** (the line **around** it), then **margin** (space **outside**, pushing other boxes away). You will also use **border-radius** to round the corners.

1 · Predict 🧠

Read each bit of CSS. Before you imagine the browser drawing it, write what you think will happen.

```
<style>
  .card {
    border: 2px solid red;
    padding: 30px;
  }
</style>
```

Lots of padding. Is the text close to the border or far from it?

```
<style>
  .card {
    border: 2px solid black;
    margin: 40px;
  }
</style>
```

Lots of margin. Does the space go inside the box or outside it, pushing other things away?

```
<style>
  .card {
    border-radius: 50px;
    width: 100px;
    height: 100px;
  }
</style>
```

A 100×100 box with a 50px corner radius. What shape do you think it becomes?

```
<style>
  .card {
    padding: 0px;
    border: 1px solid blue;
  }
</style>
```

No padding at all. Where does the text sit compared to the border line?

2 · Spot the Bug 🐛

Each bit of CSS below was meant to do something, but it is broken. Read what it is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The card is supposed to have a visible line around it. There is no line.

```
<style>
  .card {
    border: solid blue;
  }
</style>
```

Hint: a border needs a **thickness** too.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The text inside the card is supposed to have breathing room, but it is squished right up against the border.

```
<style>
  .card {
    border: 2px solid green;
    margin: 20px;
  }
</style>
```

Hint: which property adds space **inside** the box?

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The card is supposed to have softly rounded corners, but the corners are still sharp.

```
<style>
  .card {
    border: 2px solid #d4380d;
    radius: 12px;
  }
</style>
```

Hint: check the property name.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Build 3 Cards 📷

In Replit, build **3 cards** about you — for example: favourite food, favourite movie, favourite school subject. Each card has a heading and a short line of text. Make each card a little **different** in colour or border so they don't all look the same.

You can start one card like this and change it to your own:

```
<div class="card">
  <h2>My Favorite Game</h2>
  <p>Minecraft is the best!</p>
</div>

<style>
  .card {
    background-color: #ffffff;
    border: 2px solid #d4380d;
    border-radius: 12px;
    padding: 20px;
    margin: 16px;
    width: 300px;
  }
</style>
```

When you finish, send a **photo or video** of your cards (or a picture of your code), then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

My three cards are about ...

I made them look different by ...

I used padding to ...

I used border-radius to ...

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while you show your cards. Talk through it like you are teaching someone who has never seen the box model. Try to use these words: **box**, **padding**, **margin**, **border**, **rounded**.

1. Show your three cards in the browser.
2. Point to one card and show where the padding is and where the margin is.
3. Say what `border-radius` did to the corners.
4. Show one thing you got wrong at first and how you fixed it.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
