

RS001 Week 6 — English Worksheet

Topic: Clean Every Input Safely · **Course:** Text Adventure (Python) · **Time:** about 45 minutes

This week you think about how `.strip().lower()` cleans **every** `ask()` in your game, and how a game can accept several spellings of the same answer — Korean, English, short forms — so almost any sensible input works. You will read code closely and explain it in your own words.

Words to know: **clean, strip, lower, in, spelling**

1 · Predict 🧙

Read each piece of code. Run it in your head and write what you think happens.

```
d = "  RIGHT "  
d = d.strip().lower()  
game.say(f"[{d}]")
```

What is printed inside the brackets?

```
d = game.ask("way?")  
d = d.strip().lower()  
if d in ["left", "l", "왼쪽"]:  
    d = "left"  
game.say(d)
```

The player types `L`. What single word is printed?

```
d = "Left"  
d = d.lower().strip()  
game.say(f"[{d}]")
```

Here `.lower()` runs before `.strip()`. Does the result change? Why or why not?

2 · Spot the Bug 🐛

Each block was meant to do something, but it is broken. Read what it is **supposed** to do, fix it on paper, then explain why the original was wrong.

Bug A — This should accept "left", "l", or "왼쪽" and turn them all into "left". Right now it only matches the full word "left".

```
d = game.ask("way?").strip().lower()
if d == "left":
    d = "left"
game.say(d)
```

Hint: swap `==` for `in [ ... ]` and list the spellings you want to allow.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — Two inputs (a direction and an action) should both be cleaned. Right now only the first one is, so the action still has spaces and capitals.

```
direction = game.ask("way?").strip().lower()
action = game.ask("do what?")
game.say(f"{direction} / {action}")
```

Hint: the second input needs the same cleaning treatment.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The match list should be in **lowercase** so the cleaned input can find it. Right now the list has a capital letter, so a cleaned `"left"` never matches.

```
d = game.ask("way?").strip().lower()
if d in ["Left", "l"]:
    d = "left"
game.say(d)
```

Hint: after `.lower()`, the input is lowercase — the list must be too.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Explain the Code

Read this working example slowly. It cleans the player's answer and accepts several spellings of "left".

```
direction = game.ask("Which way? (left/right)")
direction = direction.strip().lower()
if direction in ["left", "l", "왼쪽"]:
    direction = "left"
```

What does `.strip()` remove from the player's answer?

What does `.lower()` do to a capital letter the player typed?

Why must the words in the list `["left", "l", "왼쪽"]` all be lowercase?

The player types `" Left "`. After line 2, what is the value of `direction` ? Does the `if` match?

Why is it helpful to turn "1" and "왼쪽" both into "left" before the rest of the game runs?

4 · Explain Your Lesson Code 🎥

In today's live lesson you cleaned the inputs in your own game. Now explain that code in a short video on your phone (or a parent's phone). You may show your game running. Teach it like the viewer has never coded. Try to use these words: **clean, strip, lower, in, spelling**.

1. Show one `ask()` line from your game and read your `.strip().lower()` out loud.
2. Explain what `.strip()` and `.lower()` each do to the player's answer.
3. Read your `if ... in [ ... ]` line and say which spellings you allowed.
4. Run it once with a "normal" answer and once with a different spelling, and show both reaching the same path.

Write what you will say in your video. Plan it here before you record.
