

RS001 Week 16 — English Worksheet

Topic: Everything Together — The Finished Game · **Course:** Text Adventure (Python) · **Time:** about 60 minutes

This is the final week. In your live lesson you built one whole game out of **every** idea from weeks 1–15: variables, lists, cleaned and validated input, branching, battle functions, randomness, an inventory, and a score-based ending. This worksheet is for **thinking about** and **explaining** that code — reading it, predicting it, and finding bugs on paper. At the end you will present the finished game you built.

Words to know: **variable, function, random, inventory, ending**

```
if score == 3 and "golden key" in backpack and "gem" in backpack:
    ending = "King ending – every secret and treasure is yours!"
elif score == 3 and ("golden key" in backpack or "map" in backpack):
    ending = "Sage ending – you solved the riddles and found the way."
```

1 · Predict 🧠

Read each piece of code. In your head, work out what happens, then write your answer.

```
backpack = ["sword", "map"]
if "map" in backpack:
    game.say("You unfold the map.")
else:
    game.say("You are lost.")
```

Which message appears?

```
score = 3
backpack = ["golden key"]
if score == 3 and "golden key" in backpack:
    game.say("Best ending!")
else:
    game.say("Another ending.")
```

and needs both sides true. Which message appears?

```
score = 3
backpack = ["map"]
if score == 3 and ("golden key" in backpack or "map" in backpack):
    game.say("Sage ending")
```

or needs only one side true. Does the sage ending print? Why?

2 · Spot the Bug 🐛

Each block was meant to do something, but it is broken. Read what it is **supposed** to do, fix it on paper, then explain why the original was wrong.

Bug A — A reward won in battle should be added to the inventory. Right now the reward is named but never goes into the backpack.

```
backpack = ["sword"]
reward = "golden key"
game.say(f"You won a {reward}!")
game.say(f"Bag: {backpack}")
```

Hint: use `backpack.append(reward)` to add it.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The best ending should need **both** a perfect score **and** the golden key. Right now it uses `or`, so it fires too easily.

```
score = 1
backpack = ["golden key"]
if score == 3 or "golden key" in backpack:
    game.say("King ending – perfect run!")
else:
    game.say("A smaller ending.")
```

Hint: swap `or` for `and` so both conditions must be true.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The endings should be checked from **best to worst**, so the rarest one is found first. Right now a low-bar ending is checked first and steals every player.

```
if score >= 1:
    ending = "Adventurer ending"
elif score == 3 and "golden key" in backpack:
    ending = "King ending"
game.say(ending)
```

Hint: put the strictest condition (the King ending) at the top.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Explain the Code

This is how a finished game decides its ending. Read it carefully, then answer the questions.

```
backpack = ["golden key", "map"]
score = 3

if score == 3 and "golden key" in backpack and "gem" in backpack:
    ending = "King ending – every secret and treasure is yours!"
elif score == 3 and ("golden key" in backpack or "map" in backpack):
    ending = "Sage ending – you solved the riddles and found the way."
elif score >= 1:
    ending = "Adventurer ending – you made it out alive."
else:
    ending = "Lost ending – the dungeon keeps you."

game.say(ending)
```

What two things does the `backpack` list hold at the start, and what number is in `score` ?

The King ending needs three things to all be true. Why does this run NOT give the King ending?

Which ending does this code actually choose? Explain how Python reached it.

Why is the King ending checked before the Sage ending and not after?

What would the last line `game.say(ending)` print to the player?

4 · Explain Your Lesson Code 🎥

Present the finished game you built across this course. Record a video on your phone (or a parent's phone): show the game **running**, then explain the key parts of the code in your own words. Teach it like the viewer has never coded. Try to use these words: **variable**, **function**, **random**, **inventory**, **ending**.

1. Play your finished game from start to finish so we can see it run.
2. Point to one or two pieces of code you are most proud of and say what they do.
3. Explain how your endings are chosen from the score and the inventory.
4. Tell us the hardest bug you hit and how you solved it.

Write what you will say in your video. Plan it here before you record.
