

M004 Week 1 — English Worksheet (Beginner)

Topic: Functions with Parameters & Returns · **Course:** Functions & Games · **Level:** Beginner · **Time:** about 30 minutes

This week you give a function a **parameter** — a number it uses inside. Call it with different numbers and it builds different things.

1 · Predict

Read the steps. Before you imagine the agent doing it, circle or write your answer.

```
define build_tower(height):
    repeat height times:
        place block
        move up

build_tower(3)
```

Does the tower become 3 blocks tall? Circle one: yes · no

Why?

```
define build_tower(height):
    repeat height times:
        place block
        move up
```

There is no call after the definition. Does anything get built? Circle one: yes · no

2 · Find the Difference 🐛

Each pair shows clean steps first, then a broken version of the same idea. Circle what's different and write one short sentence about the bug.

Pair A — The function should be **called** so the tower gets built.

```
# clean
define build_tower(height):
    repeat height times:
        place block
        move up

build_tower(3)
```

```
# buggy
define build_tower(height):
    repeat height times:
        place block
        move up
```

What is wrong? Why does the buggy code build nothing?

Pair B — The function should use the **parameter** `height`, not a fixed number.

```
# clean
define build_tower(height):
    repeat height times:
        place block
        move up
```

```
# buggy
define build_tower(height):
    repeat 3 times:
        place block
        move up
```

What is wrong?

3 · Fill the Gap

The call should tell the function how tall to build. One thing is missing. Fill it in using the word bank.

```
define build_tower(height):  
    repeat height times:  
        place block  
        move up  
  
build_tower(____)
```

Word bank: 5 · repeat · define

Write the missing word:

4 · Tell Me What You Built 📷

Now switch to your homework world. Write one tower function with a `height` parameter and call it two times with different numbers. When you finish, come back here.

Send a photo or video of your towers, then explain what you did. Use these sentence starters — write 2 or 3 sentences.

My function's parameter was ...

When I called it with a different number, ...

One tricky moment was when ...

5 · Record Your Walkthrough 🎥

Take a video on your phone (or a parent's phone) while your code builds the towers. Talk like you are teaching a friend. Try to use these words: **function**, **parameter**, **call**.

1. Show your function definition, then run your code.
2. Show two towers built with different numbers.
3. Say in your own words what a **parameter** is.

Write what you will say in your video. You can read from it while filming.
