

M004 Week 2 — English Worksheet

Topic: Chat Commands · **Course:** Functions & Games · **Time:** about 45 minutes

This week you type a word in chat and your code runs. A **chat command** can even take a number with it — so `tower 5` builds a 5-block tower using your function from last week.

1 · Predict 🧠

Read each set of steps. Before you imagine the agent doing it, write what you think will happen.

```
on chat command "bridge":
  repeat 6 times:
    place block
    move forward
```

You type `bridge` in chat. What does the agent do? What if you type nothing?

```
on chat command "tower" with number n:
  repeat n times:
    place block
    move up
```

You type `tower 4` in chat. How tall is the tower? What about `tower 8` ?

```
define build_tower(height):  
    repeat height times:  
        place block  
        move up  
  
on chat command "tower" with number n:  
    build_tower(n)
```

The chat command passes **n** into the function. You type **tower 3** — what happens, step by step?

2 · Spot the Bug 🐛

Each block of code below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — Typing `bridge` in chat should build a bridge. But when you type `bridge`, **nothing runs**.

```
on chat command "brige":  
  repeat 6 times:  
    place block  
    move forward
```

Hint: read the command name very slowly, letter by letter.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — `tower 7` should build a tower 7 blocks tall. The command receives the number, but the tower is always 3 tall.

```
define build_tower(height):  
  repeat height times:  
    place block  
    move up  
  
on chat command "tower" with number n:  
  build_tower(3)
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — One command should build a bridge and another should build a tower. Right now they have the **same name**, so typing `build` is confusing — only one of them can win.

```
on chat command "build":  
  repeat 6 times:  
    place block  
    move forward  
  
on chat command "build":  
  repeat 4 times:  
    place block  
    move up
```

Hint: give each command its own name.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to your homework world. Make at least **two** chat commands: one simple command, and one command with a number that passes the number into a function. When you finish, come back here.

Send a photo or video of your commands running, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I ...

When I typed my command in chat, ...

My command with a number was ...

One tricky moment was when ...

To fix it, I ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while you type your commands and the code runs. Talk through it like you are teaching someone who has never seen it. Try to use these words: **chat command**, **number**, **pass**, **function**, **call**.

1. Show the chat box, type your first command, and show what happens.
2. Type your number command with a **small** number, then a **big** number, and show the difference.
3. Point at the line where the number gets **passed** into the function.
4. Say in your own words what a **chat command** does.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
