

RS004 Week 11 — English Worksheet

Topic: Coins & Score · **Course:** Platformer Game · **Time:** about 45 minutes

This week your level gets **coins** to collect. You keep them in a list, check if the player touches one, **remove** it, and add to the **score**. Then you draw the score on the screen with `pygame.font`.

Keep these words handy: **coin**, **collect**, `remove()`, **score**, **HUD (on-screen text)**.

1 · Predict 🧠

Read each snippet. Before you run it, write what you think will happen.

```
for coin in coins[:]:
    if player.colliderect(coin):
        coins.remove(coin)
        score = score + 1
```

The player touches a coin. What two things happen?

```
score_text = font.render(f"점수: {score}", True, (0, 0, 0))
screen.blit(score_text, (10, 10))
```

Where on the screen does the score appear? What does `render` make?

```
for coin in coins[:]:
```

Why loop over `coins[:]` (a copy) instead of `coins` while removing items?

2 · Trace the Score

The player collects coins one by one. Fill in the score after each step. Start with `score = 0` and 3 coins.

```
collect coin 1:  score = ____  coins left = ____  
collect coin 2:  score = ____  coins left = ____  
collect coin 3:  score = ____  coins left = ____
```

3 · Spot the Bug 🐛

Each snippet is broken. Rewrite it so it works, then explain why the original was wrong.

Bug A — Touching a coin should remove it and add a point. Right now the score goes up but the coin stays, so it scores forever.

```
for coin in coins[:]:
    if player.colliderect(coin):
        score = score + 1
```

Hint: the coin is never removed from the list.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — Removing coins while looping over the original list skips some coins and may crash.

```
for coin in coins:
    if player.colliderect(coin):
        coins.remove(coin)
        score += 1
```

Hint: loop over a *copy* of the list while you remove from the real one.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The score should show on screen, but nothing appears even though `score` is going up.

```
score_text = font.render(f"점수: {score}", True, (0, 0, 0))
```

Hint: rendering the text isn't enough — you must `blit` it onto the screen.

Write the fixed code:

Why was it wrong? Why does your fix work?

4 · Place & Extend

Start from your working coins and score.

1. Move one coin so it sits above a platform, reachable only by a jump. Write its position.

2. Change the score text colour and position. What did you pick?

3. **Stretch:** show a message when *all* coins are collected. How do you know the list is empty?

5 · Build & Show 📷

Add coins to your own level. Place several around the platforms, and make at least one a jump-only coin.

When it works, send a **photo or video** of collecting coins with the score going up, then explain what you did. Use these starters — write 4 to 6 sentences.

First, I kept my coins in a list so that ...

When the player touches a coin, I ...

I loop over `coins[:]` because ...

The score shows on screen using ...

One tricky moment was ...

If I had more time, I would ...

6 · Record Your Walkthrough 🎥

Take a video of collecting coins. Teach it to someone new. Try to use these words: **coin**, **collect**, **remove**, **score**, **render**.

1. Show your coins placed in the level.
2. Collect a few and show the score climbing.
3. Read the collect-and-remove lines out loud and explain them.
4. Reach and collect the jump-only coin.

Write what you will say in your video. Plan it here first.
