

Builder Basics — Complete Your Village (Extension)

Topic: Bring It All Together · **Course:** Builder Basics · **Type:** Extension Activity · **Time:** about 60 minutes

 This is a bonus challenge, not a weekly lesson. Try it after the Week 8 village project, once you can build with loops and move the agent between spots.

1 · The Challenge

Your village has a good start — now finish it. A real village needs more than walls. Your job is to **complete your village** so it feels like a place someone could live.

By the end, your village must have **all four** of these:

 A house with a roof  A well  A small pond  A small flower bed

There is no fixed size and no map to copy. **You** decide how big each thing is and where it goes. But there is one rule you must not break:

 **Everything must be built with code.** No placing blocks by hand. Every wall, every flower, every drop of water goes down because the agent ran your commands.

In your own words, what four things must your village have when you finish?

Why do you think we say "build it with code" instead of placing blocks by hand?

2 · Plan Before You Build

A builder plans first. For **each** of the four structures, decide what it is made of and roughly how big it is. Think about the blocks you will place and whether you need a loop.

House with a roof — What blocks? How wide and how tall? Where does the roof sit?

Well — What shape is the hole? What goes around the top? Is there water inside?

Small pond — How will you make the dip in the ground? What fills it?

Small flower bed — What holds the soil? How many flowers, and how will you place a row of them?

3 · Think in Loops

You built walls with loops in the weekly lessons. Now reuse that thinking. A loop is for anything you do **again and again** — a row of wall blocks, a row of flowers, the four sides of a well.

Which of your four structures will use a loop, and what does the loop repeat each time?

Between one structure and the next, the agent has to **walk to a new spot** so nothing lands on top of the last build.

Between the house and the pond, what will the agent do to get to a clean spot?

4 · Build Your Village 📷

Now go to your homework world and build. Run your code for each structure, one at a time, and move the agent between them. Keep going until your village has **the house with a roof, the well, the small pond, and the small flower bed** — all placed by code.

When it looks finished, send a photo or video of the whole village. Then explain what you did. Use these starters — write 4 to 6 sentences.

First, I planned the four parts by ...

I used a loop for ... because ...

To move the agent between structures, I ...

The hardest part to build with code was ...

To fix it, I ...

If I had more time, I would add ...

5 · Record Your Walkthrough 🎥

Take a video on your phone (or a parent's phone) and walk the camera through your finished village. Teach someone who has never seen it. Try to use these words: **village, house, roof, well, pond, flower bed, loop.**

1. Show each of the four structures one by one and name it.
2. For one structure, read your loop out loud and say what it repeats.
3. Show one spot where the agent walked from one build to the next.
4. Say which part you are most proud of and what you would build next.

Write what you will say in your video. Plan it here first — you can read from it while filming.
