

Builder Basics — The Trail Maker (Extension · Intermediate)

Topic: Place On Move · **Course:** Builder Basics · **Type:** Extension Activity · **Level:** Intermediate · **Time:** about 38 minutes

✖ This is a bonus challenge, not a main lesson. Try it once you are comfortable placing blocks and you want the agent to place a whole line for you.

In the Placing Blocks lesson you placed blocks one at a time. Here, type `run` and the agent flips a switch called **place on move**, then walks forward — no code to type.

When **place on move** is **ON**, the agent drops a block on every step — a **trail**. When it is **OFF**, it walks but places nothing — a **gap**.

1 · Predict 🧠

Here is the order the program runs:

```
place on move ON
move forward by 4
place on move OFF
move forward by 2
place on move ON
move forward by 4
```

One block drops per step while the switch is ON. How many blocks come from each move — `forward 4`, then `forward 2` (OFF), then `forward 4`? Write all three numbers.

Add them up. How many blocks are placed in total, and how wide is the gap in the middle?
Show your working.

2 · Trace the Switch

Walk through the program one move at a time. For each move command, write the switch state and how many blocks that stretch places.

Move command	Switch (ON / OFF)	Blocks placed
move forward 4		
move forward 2		
move forward 4		

The agent walked 10 steps but placed fewer than 10 blocks. Why? Which stretch is the reason?

3 · Reason About the Switch

No code here — think it through.

The trail comes out as one solid line with NO gap. Which line of the program went wrong? Explain in one or two sentences.

Imagine the very first **place on move ON** was missing, so the switch stayed OFF the whole time. What would be on the ground after the agent finished walking? Explain why.

4 · Make It Yours

The switch decides WHEN the agent places, and the move numbers decide HOW MANY blocks and how wide the gap is.

Design a trail that places exactly 10 blocks with a 3-wide gap in the middle. Write your ON / OFF / move sequence, line by line.

One sentence: how did you pick your move numbers to get 10 blocks?

run

one video

1 · Your code. Scroll through it. Say what each part does.

2 · Your build.

Fill the blanks:

Today I built _____.

I built it using this code: _____.

In this code I used _____.

The hardest part was _____.

That part was hard because _____.

The most fun part was _____.

Something new I learned was _____.

Write your lines here, then say them in your video.
