

## Builder Basics — The Living Village (Extension · Intermediate)

**Topic:** Bring It All Together · **Course:** Builder Basics · **Level:** Intermediate · **Type:** Extension Activity · **Time:** about 60 minutes

 This is a bonus challenge, not a main lesson. Try it after **Complete Your Village**, once you can build with loops, move the agent between spots, and place water and animals.

### 1 · The Challenge

Make your village feel like a place someone could live and work. There is no map — **you** choose the sizes and places, and it must have **all eight**:

 A **farm** — rows of crops  A **farm house**  A **house with a watchtower**  A **fence** — around the farm or the animals  A **pond with fish**  A **bridge** over the pond  A **well**  A **few animals**

 One rule: **everything you can build is built with code.** No placing blocks by hand. (Animals are spawned.)

**Why does building eight things with code beat placing them by hand one block at a time?**

|  |
|  |
|  |
|  |

## 2 · Plan the Parts

Fill in the table. For each part, note the main block you will use and whether it needs a loop.

| Part                                                                                               | Main block(s) | Loop? (yes / no) |
|----------------------------------------------------------------------------------------------------|---------------|------------------|
|  Farm             |               |                  |
|  Farm house       |               |                  |
|  Watchtower house |               |                  |
|  Fence            |               |                  |
|  Pond with fish   |               |                  |
|  Bridge           |               |                  |
|  Well             |               |                  |
|  Animals          |               |                  |

|  |
|--|
|  |
|  |
|  |
|  |

**Pick the two hardest parts to build. What makes each one tricky?**

|  |
|--|
|  |
|  |
|  |
|  |

---

### 3 · Think in Loops

A loop is for anything you repeat — a row of crops, the four sides of a fence, the planks of a bridge, the levels of a tower.

**Choose one part. Describe the loop: what does it repeat, and how many times?**

|  |
|--|
|  |
|  |
|  |
|  |

**The pond and the bridge go together. Why is it easier to build the pond *first* and the bridge *second*?**

|  |
|--|
|  |
|  |
|  |
|  |

**Between one part and the next, what must the agent do so builds don't land on top of each other?**

|  |
|--|
|  |
|  |
|  |
|  |

Record **one video** — one take, no stopping (a phone is fine). Show these in order:

## 2 · Your build.

Today I built \_\_\_\_\_.

I built it using this code: \_\_\_\_\_.

In this code I used \_\_\_\_\_.

The hardest part was \_\_\_\_\_.

That part was hard because \_\_\_\_\_.

The most fun part was \_\_\_\_\_.

Something new I learned was \_\_\_\_\_.

**Write your lines here, then say them in your video.**
