

3D Coordinates Extension — Build the Snow Golem (Advanced)

Topic: 3D Snow Golem (x, y, z) · **Course:** 3D Coordinates · **Level:** Advanced (Extension, after Lesson 6)
· **Time:** about 45 minutes

Build a **standing snow golem** in 3D — a snow body, a carved-pumpkin head, coal buttons down the front, and two stick arms — then make it your own. Every block needs **three** numbers (**x, y, z**): x **across**, y **up**, z **deeper** (forward).

- Stand on your **home spot** (red block) every run. Move your feet, move your golem.
- 🎨 Snow = **snow block**. Head = **carved pumpkin**. Buttons + eyes = **coal block**. Arms = a **brown block** (oak log).

1 · Predict 🧠

Read each set. Write your prediction **and the reason**.

```
place snow block at (3, 1, 1)
place snow block at (3, 2, 1)
place snow block at (3, 3, 1)
```

Does this snow tower go across, up, or deeper? Which number changes, and why?

```
place snow block at (3, 3, 1)
place snow block at (3, 3, 2)
place snow block at (3, 3, 3)
```

Across, up, or deeper? Which number changes, and why?

```
place snow block at (2, 1, 1)
place snow block at (4, 1, 1)
place snow block at (2, 5, 1)
place snow block at (4, 5, 1)
```

Where do these four blocks sit, and what shape do the corners mark? Why?

```
place snow block at (3, 4, 1)
place coal block at (3, 4, 1)
```

Same (x, y, z). Snow, coal, or both? Why?

2 · Spot the Bug 🐛

Fix each one. Then say why it was wrong.

Bug A — A coal button belongs **on the front** of the body at (3, 4, 1). It has only **two** numbers, so it lands flat on the ground.

```
place coal block at (3, 4)
```

Fixed code:

Why wrong? Why does your fix work? (2–3 sentences)

Bug B — An eye should be **up high on the front** of the head at (4, 7, 1). The last two numbers are swapped.

```
place coal block at (4, 1, 7)
```

Fixed code:

Why wrong? Why does your fix work? (2–3 sentences)

Bug C (*the tricky one*) — The code runs with no error, but the coal button ended up on the **side** of the body instead of the front. The snow body is built at $z = 1$, but this button was placed at $z = 2$ — one block too deep.

```
place snow block at (3, 4, 1)
place coal block at (3, 4, 2)
```

Fix it so the button is on the front face, and explain what "one block too deep" means. (2–3 sentences)

3 · Show Your Work 📷 🎥

Walk around the 🧊 snow golem in the world. Then plan and build a **full snow golem** on your home spot, then add one change of your own.

Plan your coordinates first. The body is a tall tower; the head sits on top; the eyes and buttons show on the front; the arms poke out the sides.

Snow body ($z = 1$): fill snow blocks from (2, 1, 1) to (4, 5, 1).

Pumpkin head (up, bigger y): fill carved pumpkin from (2, 6, 1) to (4, 7, 1).

Coal eyes (front): (2, 7, 1) and (4, 7, 1).

Coal buttons (front, down the middle): (3, 4, 1) and (3, 2, 1).

Arms (out the sides): a brown block at (1, 4, 1) and (5, 4, 1).

Add depth: build the snow body and pumpkin head again at $z = 2$ and $z = 3$. At $z = 2$ and $z = 3$, place plain snow and pumpkin where the eyes and buttons were — the face and buttons show on the **front only**.

Then a MODIFY challenge: change one thing your own way — a new colour, a taller body, a longer arm, a scarf, or more buttons.

💡 Tip: the eyes and buttons only show on the **front** ($z = 1$). The sides and back are plain snow.

Record **one video** — one take, no stopping (a phone is fine). Show these in order:

1 · Your code. Scroll through it. Say what each part does.

2 · Your build. Point the camera at the golem. Name the parts.

Fill the blanks:

Today I built _____.

I built it using this code: _____.

In this code I used _____.

The hardest part was _____.

That part was hard because _____.

The most fun part was _____.

Something new I learned was _____.

Write your lines here, then say them in your video.
