

AI001 Week 4 — English Worksheet

Topic: Breaking It Into Steps · **Course:** AI Coding with Replit Agent · **Time:** about 45 minutes

If you ask the AI to build a whole app in one giant prompt, it loses focus and the result is sloppy. This week you learn to go **first** → **then** → **finally**. Each step is its own prompt, and the AI builds on top of the last result.

1 · Predict

Read each plan. Before the AI builds it, write what you think the result will be like.

[One prompt]

"Build a complete to-do app with adding, deleting, checking off tasks, saving, dark mode, and animations."

This asks for everything at once. What might come out messy or missing?

[Step 1]

"Build a basic to-do screen: an input box, an 'Add' button, and an empty list."

This is just the first step. What is NOT here yet? Is that okay?

[Step 2]

"Now make the 'Add' button put the input text into the list."

[Step 3]

"Add an 'X' next to each item that deletes it."

Why is building Step 2 then Step 3 easier than asking for both at once?

2 · Spot the Weak Plan 🦎

Each plan below has a step problem. Read what the student **wanted**, then rewrite the steps in a better order or split them up. Then explain the fix.

Plan A — The steps are in the **wrong order**: it tries to delete items before any list exists.

```
[Step 1] "Add a delete button to each item."  
[Step 2] "Make a screen with an input box and an empty list."
```

Hint: you cannot delete from a list that is not built yet.

Write the steps in the right order:

Why was the order wrong?

Plan B — This "step" is actually **five things crammed into one** prompt.

```
[Step 1] "Add the list, the delete button, the checkbox,  
dark mode, and a save feature."
```

Hint: split it into separate steps, one feature each.

Write it as separate steps:

Why is one-feature-per-step better?

Plan C — The student forgot the **very first step**: there is no basic screen to build on.

```
[Step 1] "Make the add button add text to the list."  
[Step 2] "Add a delete button."
```

Hint: what has to exist before an 'add' button can work?

Write a Step 0 that goes first:

Why does the screen need to come first?

3 · Build an App in Steps 📷

Pick a **simple app idea** (a to-do list, a score counter, a flashcard page — your choice). Plan it as **4 to 5 steps**, then run each step as its own prompt in Replit.

When you finish, send a **photo or video** of the final app, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

My app idea was ...

My first step built ...

My next steps added ...

Building one step at a time helped because ...

One step I had to redo was ...

If I had more time, I would ...

4 · Write Out Your Steps

Write your **4 to 5 step prompts** in order, word for word. You will submit these with your app.

Step 1:

Step 2:

Step 3:

Step 4:

Step 5 (if you have one):

Submit 

Send this worksheet + a photo (or video) of your app + your step-by-step prompts to teacher on KakaoTalk.
