

AI001 Week 8 — English Worksheet

Topic: Final Project — Your Own App · **Course:** AI Coding with Replit Agent · **Time:** about 45 minutes (plus build time)

This is the big one. You will combine **every** skill from the past 7 weeks — specific prompts, context and examples, step-by-step building, iteration, debugging, and understanding code — to build your **own** app from start to finish. The idea must be yours.

Your project must include:

- an idea that comes from **you**,
- at least **5 prompt steps** to build it,
- at least **3 iteration prompts** to improve it,
- at least **1 debugging** moment,
- a **note** explaining what the key parts of your code do.

1 · Plan Your Idea 🌟

Before you touch the keyboard, plan. Saying the plan out loud first makes the building much smoother.

Write your idea in one sentence. "I want to build ..."

Now split that idea into 5 to 7 steps (remember Week 4 — first, then, finally). Write the step prompts in order.

Step 1:

Step 2:

Step 3:

Step 4:

Step 5:

Step 6 (if needed):

Step 7 (if needed):

2 · Build, Iterate, Debug 🐛

Run your steps in Replit one at a time. As you go, you will need to **iterate** (change just one part) and **debug** (explain an error). Keep a record here.

Iteration prompts you used (at least 3) — write each one and what it changed:

Change 1: ... → it changed ...

Change 2: ... → it changed ...

Change 3: ... → it changed ...

A bug you hit and fixed — what was broken, what the error said, and how the AI fixed it:

3 · Show Your Finished App 📷

When your app works, send the **public link** to it, **or a video** of it running. Then explain your project using these sentence starters — write 5 to 7 sentences total.

I built an app that ...

I chose this idea because ...

I split my idea into ... steps.

The hardest problem was ... and I solved it by ...

The trickiest part of the code is ...

One thing I am proud of is ...

If I built it without AI, I would have to start by ...

4 · Final Presentation 🎥

Record a short video (your phone, or a parent's phone) presenting your app, as if showing it to the class. Try to use these words: **prompt, step, iterate, debug, understand**.

1. Show your finished app running.
2. Read your one-sentence idea and show how you split it into steps.
3. Show one part of the code and explain what it does in your own words.
4. Tell the biggest problem you hit and how you solved it.

Write what you will say in your video. Plan it here before you record — you can read from it while filming.

Submit ✓

Send this worksheet + your app link (or a video) + your full prompt list (at least 7–10 prompts) + your code notes to teacher on KakaoTalk.
