

RB004 Week 3 — English Worksheet

Topic: Round Timer — Countdown to Battle · **Course:** Arena Legends · **Time:** about 45 minutes

This week your arena gets a **round timer**. The server counts down with a `for` loop and stores the number in an IntValue called **TimeLeft**. A StringValue called **RoundStatus** says `"Intermission"` or `"Battle!"`, and a GUI TextLabel listens with `.Changed` so every player can watch the clock.

1 · Predict 🧠

Read each script. Before you imagine running it in Studio, write what you think will happen.

```
-- Script in ServerScriptService
local timeLeft = game.ReplicatedStorage.TimeLeft -- IntValue

for t = 30, 0, -1 do
    timeLeft.Value = t
    task.wait(1)
end

print("Round over!")
```

What is timeLeft.Value right after the loop starts? What is it at the end? About how many seconds does the loop take?

```
-- LocalScript inside the TextLabel
local timeLeft = game.ReplicatedStorage.TimeLeft
local label = script.Parent

timeLeft.Changed:Connect(function(newTime)
    label.Text = "Time: " .. newTime
end)
```

The server changes `timeLeft.Value` from 30 down to 0. What does the label show while the timer runs? When does the function run?

```
-- Script in ServerScriptService
local roundStatus = game.ReplicatedStorage.RoundStatus -- StringValue

roundStatus.Value = "Intermission"
task.wait(10)
roundStatus.Value = "Battle!"
```

What is `roundStatus.Value` during the first 10 seconds? What is it after? When would players see "Battle!" on screen?

2 · Spot the Bug 🐛

Each block of code below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The timer should count **down** from 30 to 0. Instead, the loop never runs at all and "Round over!" prints right away.

```
-- Script in ServerScriptService
local timeLeft = game.ReplicatedStorage.TimeLeft

for t = 30, 0 do
    timeLeft.Value = t
    task.wait(1)
end

print("Round over!")
```

Hint: without a step, a **for** loop counts **up** by 1 — and it cannot count up from 30 to 0.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The timer should tick once per second. Instead, it jumps from 30 to 0 instantly, then waits.

```
-- Script in ServerScriptService
local timeLeft = game.ReplicatedStorage.TimeLeft

for t = 30, 0, -1 do
    timeLeft.Value = t
end
task.wait(1)

print("Round over!")
```

Hint: the wait must happen **inside** the loop, once per tick.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The label should update every time the timer changes. Instead, it shows "Time: 30" forever.

```
-- LocalScript inside the TextLabel
local timeLeft = game.ReplicatedStorage.TimeLeft
local label = script.Parent

label.Text = "Time: " .. timeLeft.Value
```

Hint: setting the text **once** is a photo, not a video. The label needs to **listen** for changes.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now open your own arena game. Build a round timer: an `IntValue` **TimeLeft** in `ReplicatedStorage`, a server countdown loop, and a `TextLabel` that updates with `.Changed`. When you finish, come back here.

Send a photo or video of the timer counting down on screen, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I ...

My **for** loop counts down because ...

I put `task.wait(1)` inside the loop so that ...

The label updates when ...

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while your timer counts down. Talk through it like you are teaching someone who has never seen it. Try to use these words: **countdown**, **loop**, **IntValue**, **Changed**, **update**.

1. Show your server script and read the **for** line out loud — say what 30, 0, and -1 mean.
2. Run the game and show the label ticking down once per second.
3. Point at the **.Changed** connection and say when it runs.
4. Say in your own words why the timer lives on the **server**, not on one player's screen.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
