

RB001 Week 2 — English Worksheet

Topic: Variables — the Ghost Platform · **Course:** Obby Architect · **Time:** about 45 minutes

This week you learned **variables** — names that hold a value. With `local platform = script.Parent` you give the part a name, then use that name to change it. You used this to build a ghost platform trick.

1 · Predict 🧠

Read each script. Before you run anything, write what you think will happen.

```
local platform = script.Parent
platform.Transparency = 0.5
```

What does the platform look like when the game runs?

```
local name = "Ghost Step"
local jumps = 3
print(name)
print(jumps)
```

What does the Output window show? Write the lines in order.

```
local platform = script.Parent
platform.Transparency = 0.5
platform.CanCollide = false
```

A player jumps onto this platform. What do they see? What happens to them?

2 · Spot the Bug 🐛

Each script below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The script should make the platform half see-through. It runs, but there is a red error in the Output window. Read the variable name very carefully.

```
local platform = script.Parent
platfrom.Transparency = 0.5
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The platform should be **half** see-through, so players can still spot it. Instead it disappears completely.

```
local platform = script.Parent
platform.Transparency = 50
```

Hint: Transparency goes from 0 to 1.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The script should make a variable for the platform, then turn off its collision. One Luau word is missing at the start.

```
platform = script.Parent  
platform.CanCollide = false
```

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to your own obby in Roblox Studio. Build a ghost platform trick section — some platforms are real, and some are ghosts that players fall through. Use variables, `Transparency`, and `CanCollide`. When you finish, come back here.

Send a photo or video of your trick section, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I ...

I made a variable called ...

The ghost platform uses **Transparency** of ... because ...

CanCollide = false means ...

One tricky moment was when ...

To fix it, I ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while a player tries your trick section. Talk through it like you are teaching someone who has never seen it. Try to use these words: **variable**, **local**, **Transparency**, **CanCollide**, **ghost**.

1. Show your trick section in Roblox Studio, then run the game.
2. Walk onto a real platform, then fall through a ghost one.
3. Open your script and read the `local platform = script.Parent` line out loud.
4. Say in your own words what a **variable** is.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
