

RB001 Week 3 — English Worksheet

Topic: Functions & Events — the Lava Floor · **Course:** Obby Architect · **Time:** about 45 minutes

This week you learned **functions** and the **Touched event**. A function is a block of code with a name.

`lava.Touched:Connect(onTouch)` tells Roblox: "when something touches the lava, run this function." You used this to build a kill brick.

1 · Predict 🧠

Read each script. Before you run anything, write what you think will happen.

```
local lava = script.Parent

local function onTouch(otherPart)
    print("Something touched the lava!")
end

lava.Touched:Connect(onTouch)
```

When does the message print? Does it print if nothing ever touches the lava?

```
local lava = script.Parent

local function onTouch(otherPart)
    print("Lava is ready")
end

print("Game started")
lava.Touched:Connect(onTouch)
```

Which message prints first when the game starts? When does the other one print?

```
local lava = script.Parent

local function onTouch(otherPart)
    local humanoid = otherPart.Parent:FindFirstChildWhichIsA("Humanoid")
    if humanoid then
        humanoid.Health = 0
    end
end

lava.Touched:Connect(onTouch)
```

A player steps on the lava — what happens to them? A loose ball rolls onto the lava — what happens to it?

2 · Spot the Bug 🐛

Each script below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The lava should kill any player who touches it. The script runs with no error, but nothing ever happens when you step on it. One line is missing.

```
local lava = script.Parent

local function onTouch(otherPart)
    local humanoid = otherPart.Parent:FindFirstChildWhichIsA("Humanoid")
    if humanoid then
        humanoid.Health = 0
    end
end
```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The lava should kill players only. It works for players, but when a loose ball rolls onto the lava, a red error appears in the Output window.

```

local lava = script.Parent

local function onTouch(otherPart)
    local humanoid = otherPart.Parent:FindFirstChildWhichIsA("Humanoid")
    humanoid.Health = 0
end

lava.Touched:Connect(onTouch)

```

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The lava should print **Burned!** when touched. There is a red error as soon as the game starts. Look at the **order** of the lines.

```

local lava = script.Parent

lava.Touched:Connect(onTouch)

local function onTouch(otherPart)
    print("Burned!")
end

```

Hint: Luau reads a script from top to bottom.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now switch to your own obby in Roblox Studio. Build a lava floor section with kill bricks — touch the lava and your character's health drops to 0. When you finish, come back here.

Send a photo or video of your lava section, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I ...

My function is called ... and it runs when ...

I used `:Connect` to ...

I checked for a Humanoid because ...

One tricky moment was when ...

To fix it, I ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while a player runs your lava section. Talk through it like you are teaching someone who has never seen it. Try to use these words: **function**, **event**, **Touched**, **Connect**, **Humanoid**.

1. Show your lava section in Roblox Studio, then run the game.
2. Step on the lava and show what happens to your character.
3. Open your script and read the `lava.Touched:Connect(onTouch)` line out loud.
4. Say in your own words what an **event** is.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
