

RS002 Week 1 — English Worksheet

Topic: input + Variables — Welcome, Trainer! · **Course:** Pokédex App · **Time:** about 45 minutes

This week your program **asks the user a question** with `input()`, **stores the answer** in a variable, and **prints a welcome screen** with an f-string. This is the very first screen of your Pokédex app — you will build on it for the next 15 weeks.

Coming from RS001? You used `game.ask()` before. This week we use plain Python `input()`. Same idea — ask, remember, use — but it is the standard Python way.

1 · Predict 🧠

Read each block. Before you run it, write what you think will happen.

```
trainer_name = input("트레이너님, 이름을 알려주세요: ")
print(f"환영합니다, {trainer_name} 트레이너님!")
```

If the user types `지우`, what does the program print? Where does `지우` get stored?

```
trainer_name = input("이름: ")
print("환영합니다, trainer_name 트레이너님!")
```

Careful — there is no `f` and no `{ }` here. What does this print, exactly?

```
trainer_name = input("이름을 알려주세요: ")

if trainer_name == "":
    trainer_name = "이름 모를 트레이너"

print(f"환영합니다, {trainer_name} 트레이너님!")
```

The user just presses Enter without typing anything. What name gets printed? Why?

2 · Spot the Bug 🐛

Each block was meant to do something, but it is broken. Read what it is **supposed** to do, rewrite it so it works, then explain why the original was wrong.

Bug A — This should print `환영합니다, 이슬 트레이너님!` when the user types `이슬`. Right now it prints the variable name instead of the value.

```
trainer_name = input("이름: ")
print("환영합니다, trainer_name 트레이너님!")
```

Hint: an f-string needs both the `f` and curly braces around the variable.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — This should store the trainer's name, then greet them. Right now it greets *before* it ever asks.

```
print(f"환영합니다, {trainer_name} 트레이너님!")
trainer_name = input("이름: ")
```

Hint: you can only use a variable *after* you have made it.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — When the user types nothing, this should fall back to `이름 모를 트레이너`. Right now an empty answer prints an empty name.

```
trainer_name = input("이름: ")  
print(f"환영합니다, {trainer_name} 트레이너님!")
```

Hint: check for `""` and set a default before you print.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Modify It

Start from this working intro:

```
trainer_name = input("트레이너님, 이름을 알려주세요: ")

if trainer_name == "":
    trainer_name = "이름 모를 트레이너"

print(f"\n=== 포켓몬 도감 ===")
print(f"환영합니다, {trainer_name} 트레이너님!")
print(f"오늘도 새로운 포켓몬을 만날 준비가 되셨나요?\n")
```

Make these changes one at a time and run after each:

1. Change the title line so it reads `=== 나만의 포켓몬 도감 ===`.
2. Add one more `print` line that says something friendly to the trainer using their name again.
3. Change the empty-name default to a funny name of your choice.

Write your three changed lines here:

4 • Make It

Open your homework world. Build your own **Pokédex intro screen** from scratch. It should:

- ask the trainer for their name with `input()` ,
- give a default name if they type nothing,
- print a welcome screen that uses the name in an f-string.

When it works, send a **photo or video** of your screen on KakaoTalk, then explain what you did. Use these sentence starters — write 4 to 6 sentences.

First, I used `input()` to ...

I stored the answer in a variable called ...

My f-string put the name into the message by ...

When the user types nothing, my program ...

The trickiest part was ...

`input()` is different from RS001's `game.ask()` because ...

5 · Record Your Walkthrough 🎥

Take a video on your phone while your program runs. Talk through it like you are teaching someone new. Try to use these words: **input**, **variable**, **f-string**, **default**, **print**.

1. Run your program and type your name.
2. Read your `input()` line out loud and say what it stores.
3. Read your f-string out loud and point to the `{ }` part.
4. Run it again, type nothing, and show the default name appear.

Write what you will say in your video. Plan it here first — you can read from it while filming.
