

RS001 Week 3 — English Worksheet

Topic: Lists and Choices · **Course:** Text Adventure (Python) · **Time:** about 45 minutes

This week you learn the **list** — one box that holds many values. You pull a value out by its **index**: the first item is `[0]`, the second is `[1]`, the third is `[2]`.

```
weapons = ["sword", "bow", "wand"]
game.say(f"You can choose: {weapons[0]}, {weapons[1]}, {weapons[2]}")
```

1 · Predict 🧠

Read each piece of code. Before you run it in your head, write what you think the screen will show.

```
paths = ["left", "middle", "right"]
game.say(paths[1])
```

Which word appears? (Careful — counting starts at 0.)

```
enemies = ["goblin", "orc", "dragon"]
enemy_hp = [10, 25, 100]
game.say(f"{enemies[2]} has {enemy_hp[2]} HP")
```

The two lists share the same index. What sentence is printed?

```
items = ["map", "key", "torch"]
game.say(items[3])
```

The list has 3 items but the code asks for `[3]` . What goes wrong?

2 · Spot the Bug 🐛

Each block was meant to do something, but it is broken. Read what it is **supposed** to do, fix it, then explain why the original was wrong.

Bug A — This should print the **first** weapon in the list. Right now it prints the second one.

```
weapons = ["sword", "bow", "wand"]  
game.say(f"Your first weapon: {weapons[1]}")
```

Hint: the first item is not `[1]`.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — This should show all three paths as a numbered menu. Right now every line shows the **same** path.

```
paths = ["cave", "river", "field"]  
game.say(f"1: {paths[0]}")  
game.say(f"2: {paths[0]}")  
game.say(f"3: {paths[0]}")
```

Hint: lines 2 and 3 should use a different index.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The enemy name and its HP should belong to the **same** enemy. Right now the name is the goblin but the HP is the dragon's.

```
enemy_names = ["goblin", "orc", "dragon"]
enemy_hp = [10, 25, 100]
game.say(f"A {enemy_names[0]} appears! HP: {enemy_hp[2]}")
```

Hint: the same enemy lives at the same index in both lists.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Add an Inventory

Open your game. After your opening, add a **list** for the hero's starting items (an inventory) and show them on screen. Then add a second list — a menu of **paths** the player can read.

When it works, send a **photo or video**, then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

First, I made a list called ...

The items inside it were ...

To show the second item, I used index ...

I learned that the first item is ...

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough 🎥

Take a video on your phone (or a parent's phone) while your inventory prints. Teach it like the viewer has never coded. Try to use these words: **list**, **index**, **first**, **inventory**, **value**.

1. Run your game and show the inventory on screen.
2. Point to the list in your code and read the items.
3. Pick one item and say its index out loud.
4. Explain why the first item is index 0, not 1.

Write what you will say in your video. Plan it here first.
