

WD001 Week 2 — English Worksheet

Topic: First Steps in CSS — Colors and Text · **Course:** Web Design: CSS · **Time:** about 45 minutes

This week you give your page **style**. HTML decides **what** is on the page; CSS decides **how it looks**. You write CSS inside a `<style>` tag, choose a tag with a **selector**, and set properties like `color`, `font-size`, and `background-color`.

1 · Predict 🧐

Read each bit of CSS. Before you imagine the browser drawing it, write what you think will happen.

```
<style>
  h1 {
    color: blue;
  }
</style>
```

Every `<h1>` on the page — what colour does the text become?

```
<style>
  body {
    background-color: black;
  }
  p {
    color: black;
  }
</style>
```

The background and the paragraph text are both black. What problem do you predict?

```
<style>
  h1 {
    font-size: 60px;
  }
  p {
    font-size: 12px;
  }
</style>
```

Which text looks bigger on the page, the heading or the paragraph? By a lot or a little?

```
<style>
  p {
    color: red;
    color: green;
  }
</style>
```

Two **color** lines on the same **p**. Which colour wins? Make a guess, then test it.

2 · Spot the Bug 🐛

Each bit of CSS below was meant to do something, but it is broken. Read what it is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The heading is supposed to turn orange. Nothing changes.

```
<style>
  h1
    color: orange;
}
```

Hint: a curly bracket is missing where the rule starts.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — The paragraph text is supposed to be size 20. Nothing changes.

```
<style>
  p {
    font-size: 20
  }
</style>
```

Hint: the value needs a unit, and the line needs to end properly.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The whole page background is supposed to be light yellow, but the colour shows up on the headings instead.

```
<style>
  h1 {
    background-color: #fff8e7;
  }
</style>
```

Hint: which selector means "the whole page"?

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Restyle Your Page 📷

Open last week's About Me page in Replit. Add a `<style>` tag and make it yours:

1. pick a **background colour** for the whole page (`body`),
2. give your heading and your paragraph **different colours**,
3. choose a font with `font-family` .

You can start from this and change the values to your own taste:

```
<style>
  body {
    background-color: #fff8e7;
    font-family: Arial, sans-serif;
  }
  h1 {
    color: #d4380d;
    font-size: 36px;
  }
  p {
    color: #333333;
    font-size: 18px;
  }
</style>
```

Then try your **heading size two different ways** (for example `36px` and `48px`) and keep the one you like better.

When you finish, send a **photo or video** of your page (or a picture of your code), then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

The colours I chose were ...

I made my heading and paragraph different by ...

I tried my heading at ___ and at ___, and I kept ...

The font I picked was ...

One tricky moment was when ...

If I had more time, I would ...

4 · Record Your Walkthrough

Now take a video on your phone (or a parent's phone) while you show your styled page. Talk through it like you are teaching someone who has never used CSS. Try to use these words: **style**, **selector**, **colour**, **font**, **background**.

1. Show your page before and after styling, if you can.
2. Read one CSS rule out loud and say which tag it changes.
3. Show your two heading sizes and say which one you kept.
4. Show one thing you got wrong at first and how you fixed it.

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.
