

WD001 Week 8 — English Worksheet

Topic: Final Project — One-Page Personal Site · **Course:** Web Design: CSS · **Time:** about 45 minutes

This is your **final build**. You will combine everything from the last seven weeks into one cohesive one-page site about you: a hero section, a menu, cards, hover effects, and a responsive layout — all sharing one colour palette so it feels like **your** site.

Your site should include all of these:

- a **hero section** (background image + heading + short intro)
- a **navigation menu** (Flexbox)
- **3 or more cards** (hobbies, favourites, dreams...)
- **hover effects**
- a **responsive** layout that works on a phone
- a **consistent colour palette**

1 · Plan First 🧠

Before you write code, sketch your site so you know what you are building. Picture your page from top to bottom.

List the sections of your page in order, from top to bottom.

Which week's idea does each section come from? (For example: hero → Week 5, menu → Week 4.)

Pick your colour palette: write down 2 or 3 colours you will use everywhere (you can write them as names or hex codes like #d4380d).

Which 3 things will your cards be about?

2 · Spot the Bug 🐛

These bugs mix up ideas from across the whole course. Read what each is **supposed** to do, then rewrite it so it works, and explain your fix.

Bug A — The hero text is supposed to sit in the middle, but it is stuck in the corner.

```
<style>
  .hero {
    background-image: url('me.jpg');
    background-size: cover;
    height: 400px;
  }
</style>
```

Hint: centring in the hero needs `display: flex` plus centring across and down.

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — On phones the cards are supposed to stack, but they stay squished in a row.

```
<style>
  .cards {
    display: flex;
  }
  @media (min-width: 600px) {
    .cards {
      flex-direction: column;
    }
  }
</style>
```

Hint: should the column rule run on **small** screens or **big** ones?

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The card is supposed to grow smoothly on hover, but it snaps and the colours clash with the rest of the page.

```
<style>
  .card:hover {
    transform: scale(1.05);
    background-color: lime;
  }
</style>
```

Hint: add a **transition** for smoothness, and pick a hover colour that matches your palette.

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Build Your Site

In Replit, combine your work from Weeks 1–7 into **one page**. Bring in your hero, your menu, your cards, your hover effects, and your responsive media query. Then polish: make all the colours and fonts match so it feels like one site.

Work in this order so it stays manageable:

1. Start with the **hero section** at the top.
2. Add your **menu** under it.
3. Add your **row of cards**.
4. Add **hover effects** to the cards.
5. Add a **media query** so it stacks nicely on a phone.
6. Go back and make every colour fit your **palette**.

When you finish, send a **PC screenshot and a phone screenshot** of your finished site (a Replit link is welcome too), then explain what you did. Use these sentence starters — write 4 to 6 sentences total.

My site has these sections ...

I used Flexbox in ...

My hover effects are on ...

On a phone my site changes by ...

The hardest part was ...

The part I'm most proud of is ...

4 · Present Your Site 🎥

This week you **present** your finished site, like a real designer showing their work. Take a video on your phone (or a parent's phone) and walk through everything you built. Try to use these words: **hero**, **flexbox**, **hover**, **responsive**, **palette**.

1. Show your full site, scrolling from top to bottom.
2. Say what each section is and which week's idea it came from.
3. Point out where you used Flexbox and where you used hover effects.
4. Make the window narrow (or show your phone) and say how the layout changes.
5. Finish with the hardest part and how you solved it.

Write what you will say in your presentation. Use the space below to plan it before you record — you can read from it while filming.
