

RB002 Week 7 — English Worksheet

Topic: Build Week — Your Full Quest · **Course:** Story Quest · **Time:** about 45 minutes

No new syntax this week. You connect everything you know — ProximityPrompt, `if/elseif/else` quest states, item counters, and reward functions — into **one full quest** that a player can start and finish.

1 · Predict 🧠

Read this complete NPC quest script. It is used for all three questions below.

```
local prompt = script.Parent.ProximityPrompt
local questDone = false

local function giveReward(player, amount)
    player.leaderstats.Coins.Value += amount
end

prompt.Triggered:Connect(function(player)
    local crystals = player.leaderstats.Crystals
    if questDone then
        print("Elder: Thank you again, " .. player.Name .. "!")
    elseif crystals.Value >= 5 then
        questDone = true
        giveReward(player, 100)
        print("Elder: All 5 crystals! Take 100 coins.")
    else
        print("Elder: Please find 5 crystals. You have " .. crystals.Value .. ".")
    end
end)
```

A player with 2 crystals talks to the Elder. Which branch runs? What exactly does the Elder say?

```
elseif crystals.Value >= 5 then
    questDone = true
    giveReward(player, 100)
```

The same player comes back with 5 crystals and talks again. What three things happen, in order?

```
if questDone then
    print("Elder: Thank you again, " .. player.Name .. "!")
```

The player talks one more time AFTER finishing the quest. Does the Elder give 100 coins again? What does the Elder say? Why?

2 · Spot the Bug 🐛

Each script below was meant to do something, but it is broken. Read what the code is **supposed** to do, then rewrite it so it works. After that, explain why the original was wrong and why your fix works.

Bug A — The reward should happen **once**. Right now the Elder gives 100 coins every single talk, because the quest state never changes.

```
prompt.Triggered:Connect(function(player)
    local crystals = player.leaderstats.Crystals
    if questDone then
        print("Elder: Thank you again!")
    elseif crystals.Value >= 5 then
        giveReward(player, 100)
        print("Elder: All 5 crystals! Take 100 coins.")
    else
        print("Elder: Please find 5 crystals.")
    end
end)
```

Hint: which line should set `questDone` to `true` ?

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug B — Same goal: reward only once. Here `questDone = true` exists, but the **branch order** is wrong, so the reward still repeats.

```

prompt.Triggered:Connect(function(player)
    local crystals = player.leaderstats.Crystals
    if crystals.Value >= 5 then
        questDone = true
        giveReward(player, 100)
    elseif questDone then
        print("Elder: Thank you again!")
    else
        print("Elder: Please find 5 crystals.")
    end
end)

```

Hint: the crystals stay at 5 after the quest, so the first check always wins. Which check must come **first**?

Write the fixed code:

Why was it wrong? Why does your fix work?

Bug C — The quest should finish with 5 **or more** crystals. A player who collected 6 crystals can never finish.

```

elseif crystals.Value == 5 then
    questDone = true
    giveReward(player, 100)

```

Hint: `==` means "exactly equal".

Write the fixed code:

Why was it wrong? Why does your fix work?

3 · Tell Me What You Built 📷

Now open your Story Quest game in Roblox Studio and build your **full quest world**. Plan it first: 3 NPCs, what each one says, where the items are, what the reward is, and how the quest ends. Then build it. When you finish, come back here.

Send a photo or video of your quest world, then explain your plan. Use these sentence starters — write 4 to 6 sentences total.

My quest story is ...

My three NPCs are ...

NPC 1 says ... and the player must ...

The items are hidden at ...

The reward is ...

The quest ends when ...

4 · Record Your Walkthrough 🎥

Now take a video on your phone (or a parent's phone) while you **playtest** your full quest from start to finish. Talk through it like you are teaching someone who has never seen it. Try to use these words: **quest, state, elseif, reward, function**.

1. Press Play and talk to each of your 3 NPCs. Read their lines out loud.
2. Collect all the quest items on camera.
3. Show the reward moment — the coins going up.
4. Talk to the quest NPC **again** and show that the line changed.
5. Say what would go wrong if `questDone` never turned `true` .

Write what you will say in your video. Use the space below to plan it before you record — you can read from it while filming.

Submit 

Send this worksheet + your walkthrough video to teacher on KakaoTalk.
